Klemsan®

AUTOMATION
CATALOGUE

KLEMSAN Automation

Klemsan Automation, supported by an experienced sales and technical team and an easy-to use software, is the adaptable alternative for any automation solution.
Klemsan Automation is the perfect solution for any customized or demanding need.
These products are specifically suited for integration in a wide range of applications such as waste and water treatment, access control, renewable energies, building equipment, industrial machines and transportation.

Made in **Turkey**

We build the best automation products on the market right here in the Turkey and we stand behind them. We will outlast and outperform anyone on the market, and support to improve your system.

100%
Customer
Satisfaction

Save your time and energy with fast response

Logistics and After Sales Service

Maximum dependability

Simple and effective functions suitable for your application

Analysis of customer requirements

Behind every project technologies and expertise

OHSAS 18001-2007
ISO 9001

Time & Control
Management Solutions
Timing is everything

Defining a timer in simple terms

A timer is an automation device that either keeps track of how much time has been spent doing something or that counts down a specified duration of time. After a predefined time has elapsed, the timer closes or opens its contact.

Which actions are executed?

Starting
Stopping
Delaying
Triggering

A timer can be used to start an action according to a predefined time or stop an action over a period of time. It can also add delay an action. It allows to control applications with its trigger input as well.

Which markets are they used frequently?

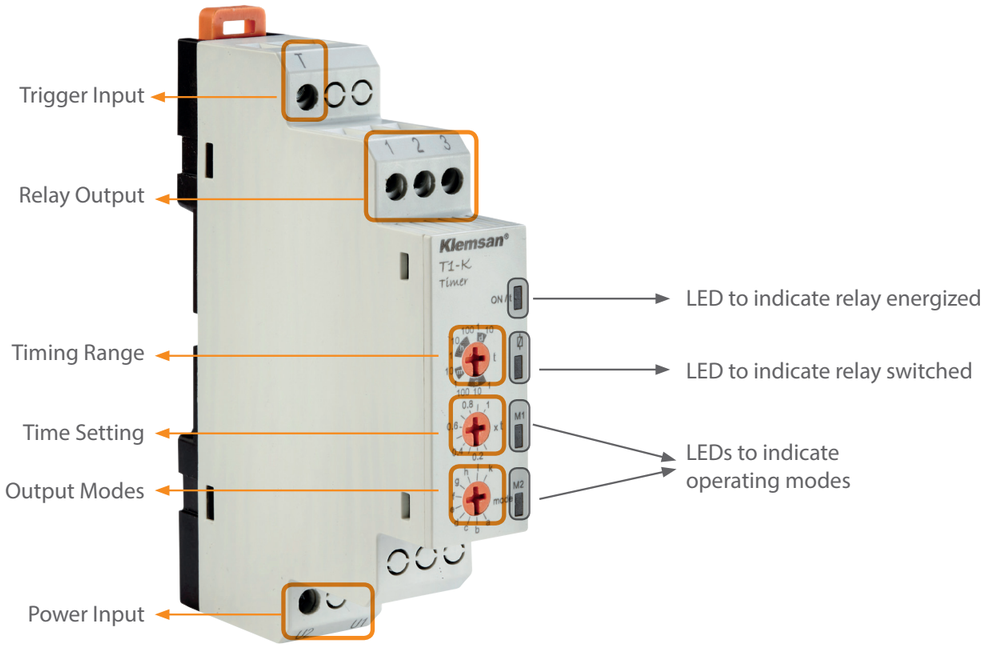
- Industrial Machines
- Illuminating
- Construction industry
- HVAC systems
- Food and agriculture industry

Benefits and Advantages

- High accuracy and switching reliability
- Sensitive timing range from 0.1sec to 10days
- High mechanical endurance
- Multifunctional operating modes
- Trigger input
- High level of Electromagnetic compatibility (EMC) i.e. maximum immunity to interferences.
- A widely range of power supply from (24 to 300VAC/DC)
- Sleek 17.5mm wide housing and compact design saves panel space.
- Perfect to fit in Modular Enclosure
- Protection against over voltage and reverse polarity
- Self-Extinguishing plastic housing

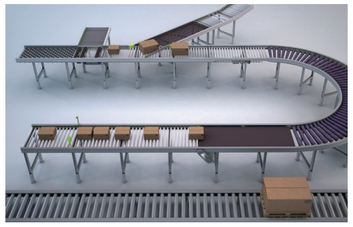
Layout & Mounting

Klemsan electronic timers are suitable for snap mounting onto 35 mm standards DIN rails.



T1-K Multifunctional Timer

Conveyor Control



Managing the operation of a conveyor belt based on the time interval between products on the belt.

Timer
T1 series

Smart Lighting

Controlling flashing on lighted signs.

Timer
T1-Flash, T1-M4, T1-M5

Remote Machinery Control

Managing maintenance of the power supply in the event of a mains power failure, switching on an external backup power source for a given time.

Timer
T1 series

Vending Machines

Automatic management of vending machines.

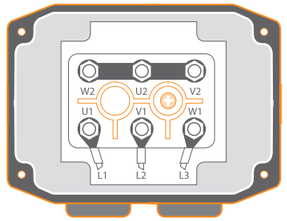
Timer
T1-K

Direction Control of Industrial Motor

Controls the direction of the motor's rotation.

TIMER
T1-LR

Star-Delta Starter



Succesfull run-up for industrial motors with star-delta relay.

Motor Starter Relay
SD1

Controlling Liquid Level in a Tank

It can be used to control the liquid level in a tank. Sensitivity resistance can be adjusted thus there is no need to change models to match different liquid types and concentrations.

Liquid Level Controller
LC3

Billboard and Street Lighting

Controlling billboards and street lights with the accurate and precise time thanks to photocell relay.

Photocell Relay
PH1-20L

Packing Machine / System

Controlling heat sealing times on blister packs, packaging bags, etc.

Timer
T1-K, T1-M5, T1-M4

Meastro astronomical relay

MEASTRO is an astonomic time relay which calculates sunrise and sunset times for the given coordinates or city selections and turns the relay contacts on and off to control connected systems without any need of photocells or external sensors. Meastro can be used as digital time relay as well.

Which actions are executed?

Thanks to the MAESTRO infrared port and remote control, the program, time, location and prayer information prepared by the computer is transferred within seconds.

MAESTRO controls devices connected to relay outputs according to user -programmed hours, sunrise and sunset times.

Street lighting, mosque lighting and air conditioning by controlling the astronomical time clock provides energy savings.

Infrared
energy savings
100 programming memories
user interface software prayer times

It has a total of 100 programming memories for 2 contactst

With the user interface software you can program your program
much faster. You can also double your speed with the control that provides infrared data transfer from the device to the controller or from the controller to the device bidirectionally.

It calculates prayer times according to the province-district or coordinate information you have set.

Which markets are they used frequently?

- Street lighting
- Site lighting
- University and college
- Mosquie lighting and conditioning systems.
- Parks, gardens and farm irrigation
- ATM's, shop windows, advertising boards, lighting

Benefits and Advantages

- Fast programming with user interface program and infrared control
- 7 year battery reserve time
- 100 programming memories
- High electromagnetic compatibility (EMC) and maximum resistance to electromagnetic noise
- User-friendly menu structure
- Perfect fit with the modular panel
- High mechanical strength
- Self-extinguishing plastic outer structure

Layout & Mounting

Klemsan astronomic timers are suitable for snap mounting onto 35 mm standards DIN rails.

MEASTRO 321

Street Lighting

In open areas such as streets, streets, parks and gardens, in closed areas such as universities, schools and buildings where lighting elements need to be turned on and off in certain periods, v astronomical time relay is used independent of human power. Meastro, which calculates the change of the sunrise and sunset time over the next 100 years, saves energy. In addition, different programs according to the days of the week, the lighting system provides periodic control.

Astronomical Timer
MEASTRO 221
MEASTRO 321

ATM, Store Showcase, Billboards Lighting

ATMs, showcase, billboards and many more areas are used MEASTRO with the aim of saving energy.

Astronomical Timer
MEASTRO 221
MEASTRO 321

Park, Garden and Field Irrigation

The control of the water pumps to be operated in agricultural areas, park or garden irrigation systems before one or more times a day is determined easily by the programming of the MEASTRO 110 astronomical time relay.

Astronomical Timer
MEASTRO 110
MEASTRO 120
MEASTRO 121
MEASTRO 221
MEASTRO 321

Mosque, Site Lighting and Air Conditioning

Control panels must be monitored carefully otherwise the effects of a power outage or voltage drop can be highly harmful for equipments.

Astronomical Timer
MEASTRO 321

Digital Timer

MAESTRO also has models that are independent of the astronomical time, and can only be used as digital time relays on the days and times set by the user.

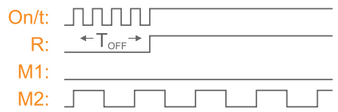
a & ND functions / On delay operation

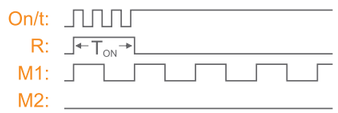
Figure and LED Indication



The output relay is initially de-energized and energized after an adjustable time delay, t_{off} .

b & FD functions / Off delay operation

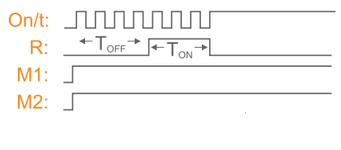
Figure and LED Indication



The output relay is initially energized and de-energized after an adjustable time delay, t_{on} .

NFD function / On-Off delay operation

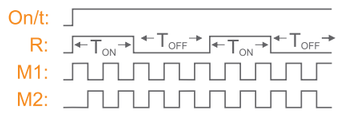
Figure and LED Indication



The output relay is initially de-energized and energized after an adjustable time delay, t_{off} and stays energized for an adjustable period, t_{on} and then de-energized.

Fon function / On flasher operation

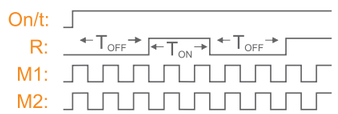
Figure and LED Indication



The output relay is initially energized and de-energized after an adjustable time delay, t_{on} and stays de-energized for an adjustable period, t_{off} and then energized. This loop is repeated until the device is powered off. "On/t" led flashes at Fon and Foff mode for "T1-M4" product.

g and Foff functions / Off flasher operation

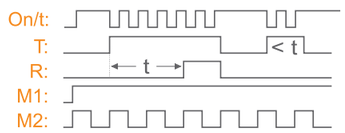
Figure and LED Indication



The output relay is initially de-energized and energized after an adjustable time delay, t_{off} and stays energized for an adjustable period, t_{on} and then de-energized. This loop is repeated until the device is powered off. "On/t" led flashes at Fon and Foff mode for "T1-M4" product.

c function / On delay with control input

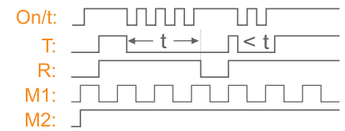
Figure and LED Indication



The output relay is initially de-energized. A contact closure on T contact triggers an adjustable time delay, t, which energizes the output relay when expired. The output relay stays energized as long as the T contact is active. Delay time, t, is cleared when the contact on T contact opens.

d function / Off delay with control input

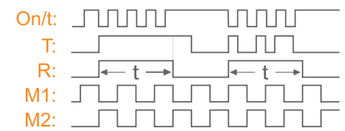
Figure and LED Indication



The output relay is initially de-energized and energized when a contact closure on T contact is detected. A contact triggers an adjustable time delay, t, which de-energizes the output relay when expired. Reclosure of the contact on T contact before the time delay is expired restarts time delay, t, and keeps the output relay energized.

e function / Rising edge triggered off delay

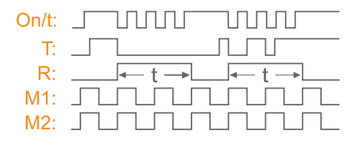
Figure and LED Indication



The output relay is initially de-energized. A contact closure on T contact both energizes the output relay and triggers an adjustable time delay, t, which de-energizes the output relay when expired. During the time delay, T contact is instensitive to state changes and becomes sensitive when time delay, t, expired.

f function / Falling edge triggered off delay

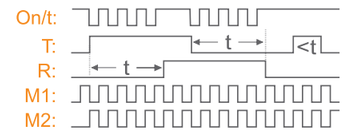
Figure and LED Indication



The output relay is initially de-energized. A state change of the T contact from closed to open both energizes the output relay and triggers an adjustable time delay, t, which de-energizes the output relay when expired. During the time delay, T contact is insensitive to state changes and becomes sensitive when time delay, t, expired.

h function / On and off delay with control input

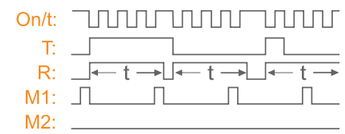
Figure and LED Indication



The output relay is initially de-energized. A contact closure on T contact triggers an adjustable time delay, t, which energizes the output relay when expired. Similarly contact release of T contact triggers the time delay, t, which de-energizes the output relay when expired. Delay time, t, is cleared when the contact state of T contact changes.

i function / Adjustable pulse output with control input

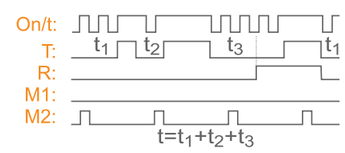
Figure and LED Indication



The output relay is initially de-energized. A state change on T contact both energizes the output relay and triggers an adjustable time delay, t, which de-energizes the output relay when expired. During the time delay, T contact is insensitive to state changes and becomes sensitive when time delay, t, expired.

k function / On delay with memory

Figure and LED Indication



The output relay is initially de-energized. If T contact is open, adjustable time delay, t, counts down and output relay energizes when t is expired. Any contact closure on T contact pauses the count down process and the process continues when the contact release on T contact occurs. A contact release is needed to restart the cycle, after the output relay is energized.

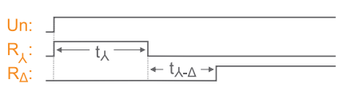
XS function / On delay adjustment for each second

Figure and LED Indication

T1-XS is an ON delay timer thet allows a sensitive time setting from 1 to 2559 seconds with 1 second increments. The output relay is initially de-energized and energized after the time delay t is expired.

SD function / Star-Delta operation

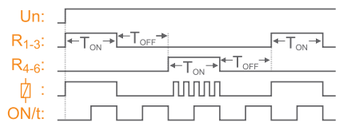
Figure and LED Indication



When the energy applied to device, star relay is energized until the end of the adjustable t_{λ} time. At the end of the adjusted delay time $t_{\lambda-\Delta}$, delta relay is energized until the device is powered off.

LR function / Left-Right operation

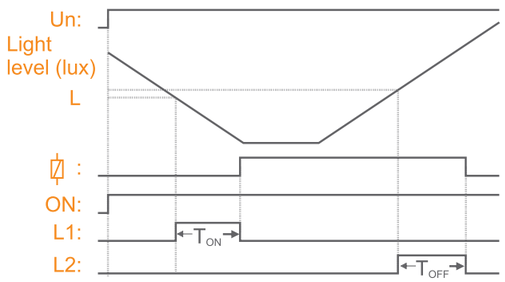
Figure and LED Indication



Initially first relay is energized. After the adjustable time delay t_{on}, relay is de-energized. Both relays are de-energized during the adjustable time delay t_{off}. At the end of t_{off}, second relay energizes. Second relay stays in this position during t_{on}. When t_{on} finished both relays are de-energized. This cycle is repeated continuously.

PHL function / Photocell operation

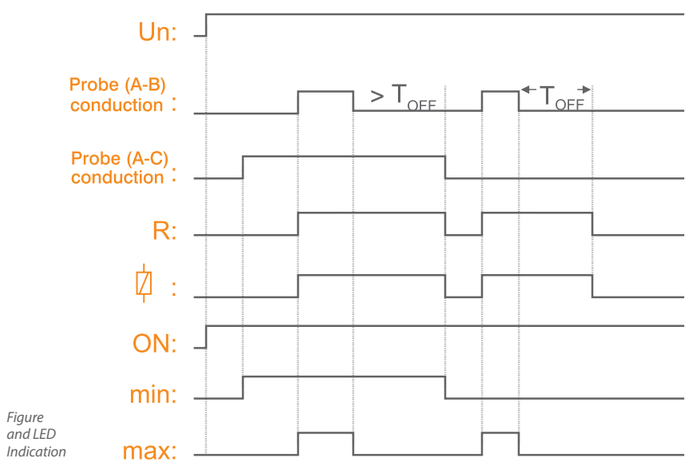
Figure and LED Indication

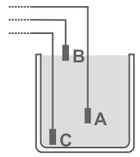


PH1-20L photocell relay measures the luminous intensity by means of a photocell sensor. On-off thereshold value is adjusted in the range of 1-20 lux, via the front adjustment dial. The output relay is energized when the ambient light level is below the adjusted limit. On and off delays are adjustable between 1 and 45 seconds, via the front panel knobs. On delay is adjusted by t_{on} knob, and off delay is adjusted by t_{off} knob.

LC function / Liquid Level Operation

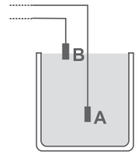
Figure and LED Indication





3 electrodes mode:

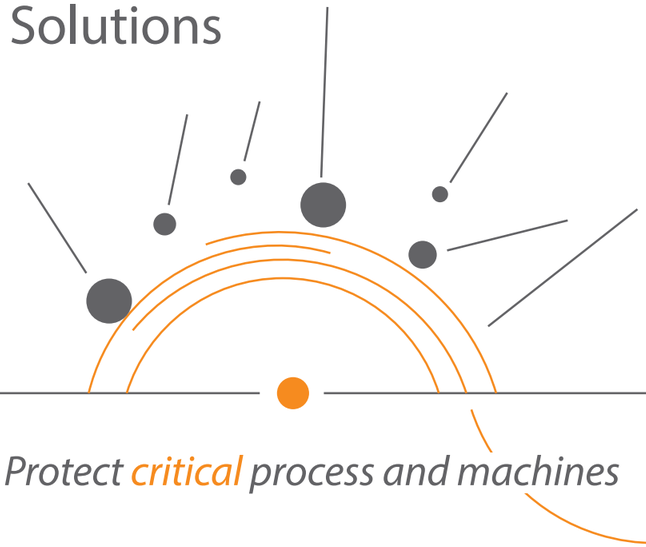
When the level of liquid in the tank reaches to electrode B, the output relay is activated and stays in this position even if the level drops below the electrode B level. The output relay is deactivated when the liquid level drops below the electrode A level. Re-activation occurs when the level reaches to the electrode B level.



2 electrodes mode:

For 2 electrodes mode of operation, A and B electrodes are used. When level of liquid in the tank reaches to electrode B, output relay is activated. When the liquid level drops below electrode B and continually stays there for the adjustable time delay (adjusted on the front panel knob); output relay will be de-energized.

Protection
Management Solutions



Protect critical process and machines

Defining a protection relay in simple terms

A protection relay is an automation device that measures electrical values and detects electrical faults.

Which actions are executed?

Sensing **Detection**
Delaying
Protection

A protection relay measures electrical values such as current, voltage, frequency etc. in order to protect your machines.

It can stop your engine from overheating with external PTC sensor.

Electrical network which is connected to your machines is examined continuously. if a fault is detected, the machine is stoped immediately or with time delay by output contacts. After that, any malfunctions can be fixed. This avoids expensive breakdowns, synonymous with production delays and loss of profitability.

Which markets are they used frequently?

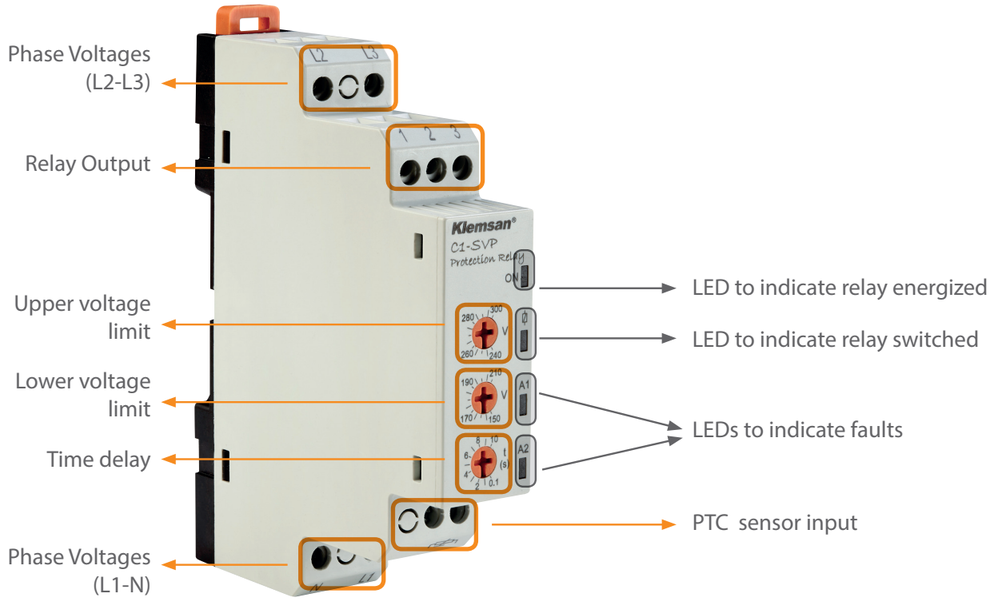
- Industrial machines
- Construction industry
- Stone pits
- Food and agriculture industry
- Water treatment system
- Moving stairs & elevators

Benefits and Advantages

- First Class quality to fulfill all your monitoring needs
- Quick view of status with leds
- Easy configuration with knobs
- High level of Electromagnetic compatibility (EMC) i.e. maximum immunity to interferences.
- Sleek 17.5mm wide housing and compact design saves panel space.
- Perfect to fit in modular enclosure
- Self-Extinguishing plastic housing
- No auxiliary supply needed
- Preventing overheating thanks to PTC input
- High mechanical endurance
- High accuracy and switching reliability

Layout & Mounting

Klemsan protection relays are suitable for snap mounting onto 35mm standards DIN rails.



C1-SVP Protection Relay

Overcurrent Protection with Smart MCB

Detect a fault condition and interrupt current flow with adjustable time delay. After the fault is gone, unlike a circuit breaker, smart MCB turns its normal position automaticlly.

CURRENT PROTECTION
CPR-16

Control Panel

Control panels must be monitored carefully otherwise the effects of a power outage or voltage drop can be highly harmful for equipments.

VOLTAGE PROTECTION
V1-S, C1-SVP, ...
G1-SA, G1-SAP, G1-A,
DPR3

Escalators

Detection of unbalanced voltage on motors.

MOTOR PROTECTION
C1D-SA, P1-SA, ...
D-SA, G1D-SAL
M1-SA, M1D-SA, DPR3

Temperature Control of Motors

Preventing overheating with external PTC sensor.

OVERHEAT PROTECTION
C1D-SVP, P1-SAP...
M1-SAP, DPR3

Conveyor Application

Detection of overcurrent when conveyor is jamed.

CURRENT PROTECTION
CPR-16

Generators

Frequency control for generators.

FREQUENCY PROTECTION
F1, DPR3

Machine Line

Providing phase loss, phase sequence and asymmetry protection for 3 phase aplications.

MOTOR PROTECTION
P1D-SA, C1-SA ...
M1D-S , M1D-SA, DPR3

Cranes

Adjustments of over and under voltage limit in order for cranes to operate correctly.

VOLTAGE PROTECTION
V1, V1D, C1-SVP,
G1-SA...
G1D-SA, DPR3

Compressors

Detection of phase-loss and sequence in order compressors to work correctly.

MOTOR PROTECTION
P1-S, C1-SA, ...
DPR3

DPR3 Digital Protection Relay

DPR31xx series is a digital protection and monitoring relay designed for three-phase systems measure voltage, frequency and monitors these parameters below:

- Over voltage
- Under voltage
- Over Frequency
- Under Frequency
- Asymmetry
- Sequence
- Phase loss
- PTC error

DPR31xx has many features;

- Undervoltage, overvoltage and frequency monitoring in three-phase AC systems 0...500 V
- Asymmetry, phase sequence, and phase loss monitoring
- Powered by external supply voltage
- Various alarms may be individually enabled/ disabled and assigned to sepa- rate output contacts
- Start-up delay, response delay, delay on release
- Adjustable switching hysteresis
- RMS measurement (AC)
- Digital LCD display with real-time rea-dings and onboard menu
- Automatic preset function available when first connecting device
- Memory stores last 4 alarm value
- Non-volatile memory for settings
- Continuous self monitoring
- Internal test/reset button
- Two separate SPDT alarm relays
- Normally energized or normally de-ener-gized operation
- Latching or non-latching operation
- Password protection for device setting
- Sealable transparent cover
- Two-module enclosure (36 mm)

Layout & Mounting

Klemsan digital protection relays are suitable for snap mounting onto 35 mmstandards DIN rails.

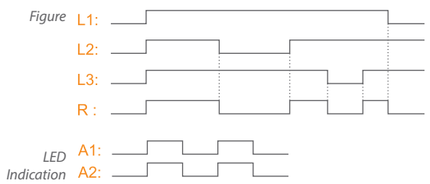
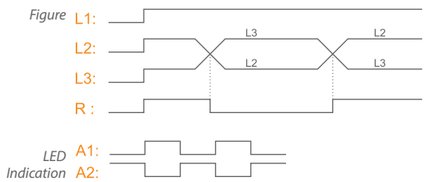
Phase Failure / Off delay operation



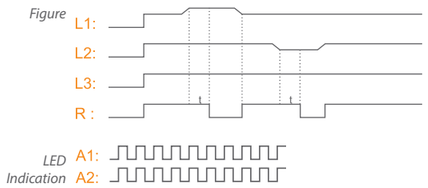
if a phase failure occurs the output relay de-energizes in 500msec.
The fault is indicated by flashing LED A1 and LED A2 simultaneously. The output relay re-energizes automatically as soon as the voltage returns to the tolerance range.

Phase Sequence Error / Off delay operation



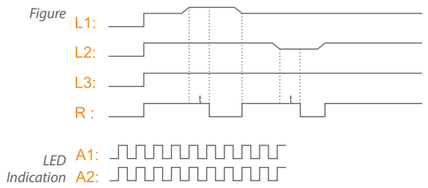
If a phase sequence error occurs the output relay de-energizes in 500msec.
The fault is displayed by alternated flashing of the LEDs A1 and A2. The output relay re-energizes automatically as soon as the phase sequence is correct again.

Adjustable Unbalance Protection / Off delay operation



If the voltage to be monitored exceeds or falls below the set phase unbalance threshold percentage(%5=>%20), the output relay de-energizes after time delay(0.1-10s). The fault is indicated by flashing LED A1 and LED A2 quickly and simultaneously.
As soon as the voltage returns to the tolerance range, taking into account a fixed hysteresis of 3%xUn the output relay re-energizes automatically.

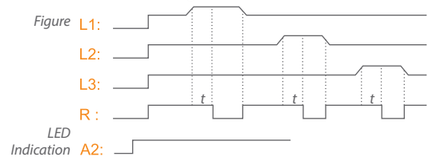
Fixed Unbalance Protection / Off delay operation



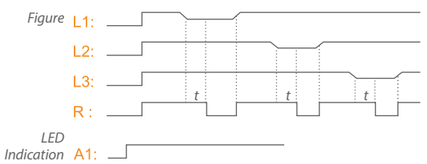
If the voltage to be monitored exceeds or falls below the set phase unbalance threshold percentage (%20), the output relay de-energizes after time delay(2sec). The fault is indicated by flashing LED A1 and LED A2 quickly and simultaneously.
As soon as the voltage returns to the tolerance range, taking into account a fixed hysteresis of 3%xUn the output relay re-energizes automatically.

Adjustable Voltage Protection / Off delay operation

Over Voltage



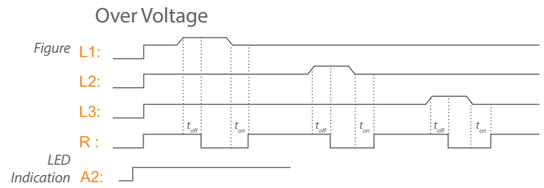
Under Voltage



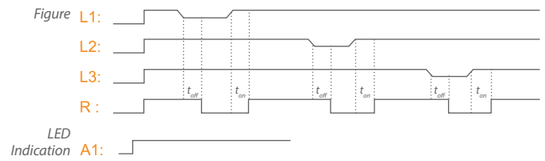
If the voltage to be monitored exceeds or falls below adjusted high limit or low limit value, the output relay de-energizes after time delay(0.1-10s). The fault type is indicated by LEDs A1 or A2 with constant light. As soon as the voltage returns to the tolerance range, taking into account a fixed hysteresis of 6VAC, the output relay re-energizes automatically.

Adjustable Voltage Protection / On-Off delay operation (Available only for V1-T)

Over Voltage



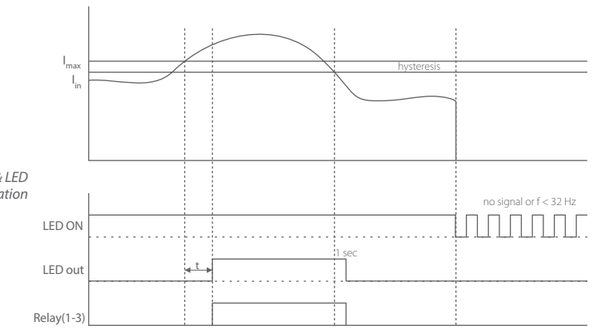
Under Voltage



If the voltage to be monitored exceeds or falls below adjusted high limit or low limit value, the output relay de-energizes after t_{off} time delay(0.1-10s). The fault type is indicated by LEDs A1 or A2 with constant light. As soon as the voltage returns to the tolerance range, taking into account a fixed hysteresis of 6VAC, the output relay re-energizes after t_{on} time delay(0.1-10s).

Adjustable Current Protection / On delay operation

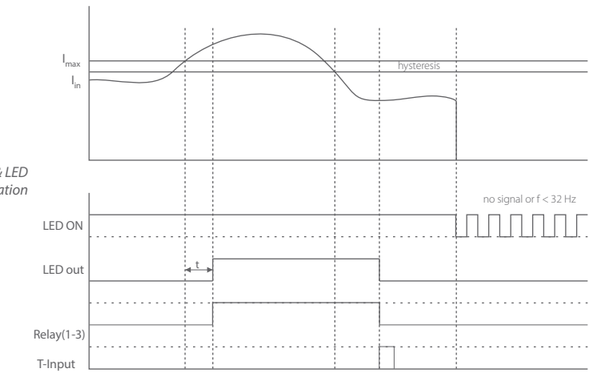
Figure & LED Indication



AUTOMATIC MODE

If the current to be monitored exceeds adjusted high limit value, the output relay de-energizes after time delay(0.1-10s). As soon as the current returns to the tolerance range, taking into account adjusted hysteresis (5-20%) and 1 second safety time, the output relay re-energizes automatically.

Figure & LED Indication



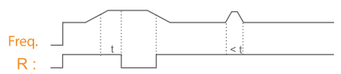
MANUAL MODE

If the current to be monitored exceeds adjusted high limit value, the output relay de-energizes after time delay(0.1-10s). After the current returns to the tolerance range, taking into account adjusted hysteresis (5-20%) and 1 second safety time, the output relay waits till trigger input is applied. After that it re-energizes automaticlly.

Adjustable Frequency Protection / Off delay operation

Over Frequency

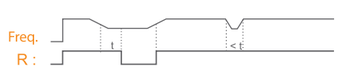
Figure



LED Indication

Under Frequency

Figure



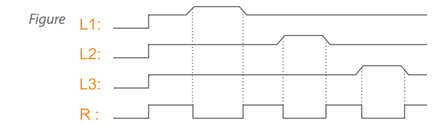
LED Indication

If the frequency to be monitored exceeds or falls below adjusted high limit or low limit value, the output relays de-energizes after time delay(1-10s). The fault type is indicated by LEDs A1 or A2 with constant light. As soon as the frequency returns to the tolerance range, taking into account a fixed hysteresis of 0.4kHz, the output relay re-energizes automatically.

Extremely High-Low Voltage Protection / Off delay operation

Over Over Voltage

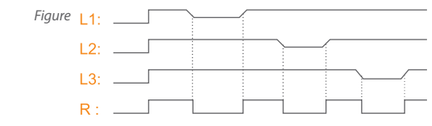
Figure



LED Indication

Under Under Voltage

Figure



LED Indication

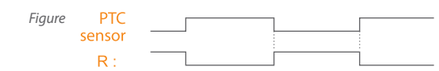
If the voltage to be monitored exceeds 310VAC for star connection device or 510VAC for delta connection device, output relay de-energizes immediately.

If the voltage to be monitored falls below 140VAC for star connection device or 240VAC for delta connection device, output relay de-energizes immediately.

The fault type is indicated by LEDs A1 or A2 with blinking. As soon as the voltage returns to the tolerance range, taking into account a fixed hysteresis of 6VAC, the output relay re-energizes automatically.

PTC Protection / Off delay operation

Figure



LED Indication

In order to use this fuction, PTC temperature sensors must be connected to the relay's PTC input. Under normal operating conditions the PTC resistance is below the response threshold. If the motor heats up excessively, it means resistance value is increased, the output relay de-energizes after 2 seconds delay.

The output relay re-energizes automatically as soon as the motor heat turns back to its normal operating conditions.

Schematics							
Dimensional Drawings							

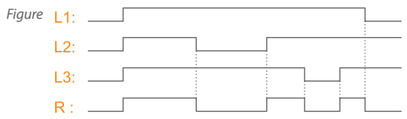
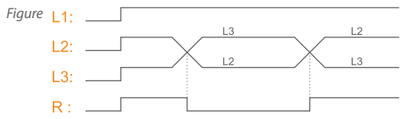
Phase Failure / Off delay operation



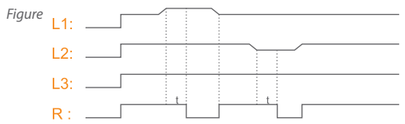
if a phase failure occurs the output relay de-energizes in 500msec.
The output relay re-energizes automatically as soon as the voltage returns to the tolerance range.

Phase Sequence Error / Off delay operation



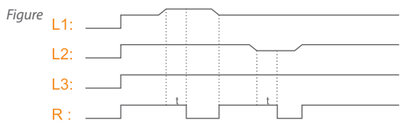
If a phase sequence error occurs the output relay de- energizes in 500msec.
The output relay re-energizes automatically as soon as the phase sequence is correct again.

Adjustable Unbalance Protection / Off delay operation



If the voltage to be monitored exceeds or falls below the set phase unbalance threshold percentage(%5--%20), the output relay de-energizes after time delay(0.1-10s). As soon as the voltage returns to the tolerance range, taking into account a fixed hysteresis of 3%xUn the output relay re-energizes automatically.

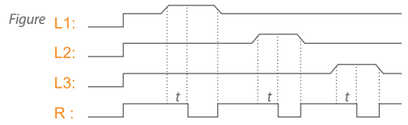
Fixed Unbalance Protection / Off delay operation



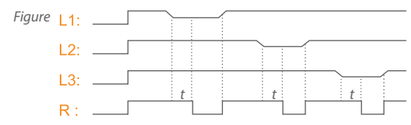
If the voltage to be monitored exceeds or falls below the set phase unbalance threshold percentage (%20), the output relay de-energizes after time delay(2sec). As soon as the voltage returns to the tolerance range, taking into account a fixed hysteresis of 3%xUn the output relay re-energizes automatically.

Adjustable Voltage Protection / Off delay operation

Over Voltage



Under Voltage



If the voltage to be monitored exceeds or falls below adjusted high limit or low limit value, the output relay de-energizes after time delay (0.1=>10sec). As soon as the voltage returns to the tolerance range, taking into account a fixed hysteresis of 6VAC, the output relay re-energizes automatically.

PTC Protection / Off delay operation

In order to use this fuction, PTC temperature sensors must be connected to the relay's PTC input. Under normal operating conditions the PTC resistance is below the response threshold. If the motor heats up excessively, it means resistance value is increased, the output relay de-energizes after 2 seconds delay.
The output relay re-energizes automatically as soon as the motor heat turns back to its normal operating conditions.

Alarm
Management Solutions

Defining an alarm annunciator in simple terms

An alarm annunciator is an automation device that provides immediate fault recognition, fault identification, visual and audible alarm for an abnormal process situation.

Which actions are executed?

Monitoring
Controlling
Communication
Data Logging **Visualizing**

An alarm annunciator monitors input parameters continuosly.

When a faulty condition occurs, it visualizes alarm status immediately or with adjustable time delay.

It provides to control your process through relay outputs and modbus communication.

Data logging with real time gives you opportunity to analyze your system.

Which markets are they used frequently?

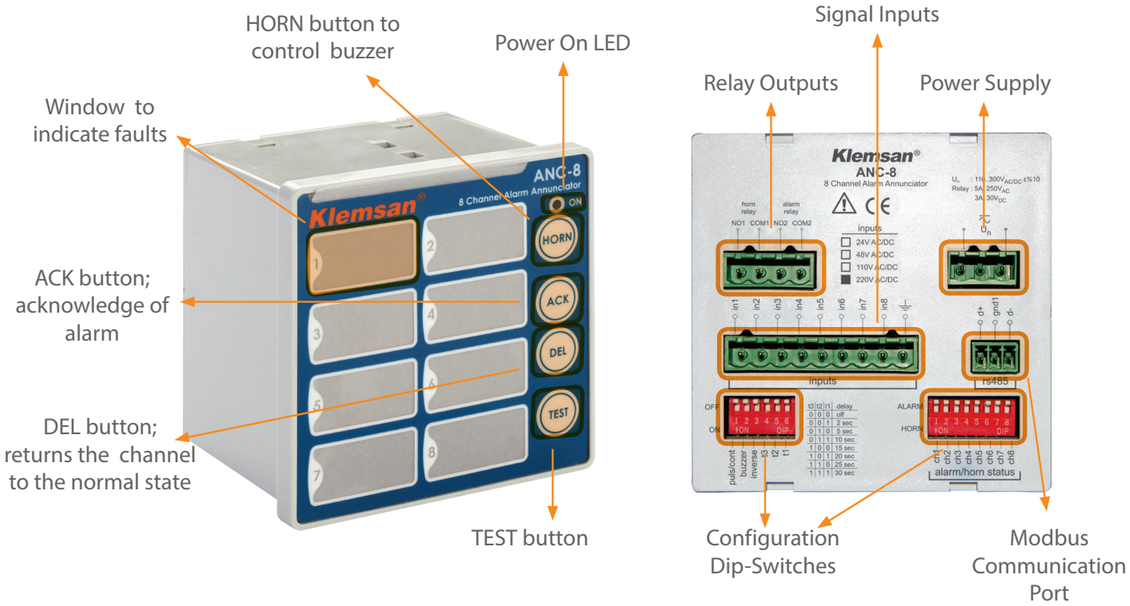
- Medium voltage modular cabinets
- Electric power plants and substations
- Industrial plants and processes
- Technical installations in buildings
- Water treatment plants, etc.

Benefits and Advantages

- Adjustable 2 color options
- Four integrated push buttons for buzzer, alarm accept, alarm clear and led test.
- Three flashing rates indicate different types of faults
- Easy configuration with dip-switches
- DC or AC supply/input voltage.
- Super bright LEDs for long distance visibility
- Various sizes & fonts for window inscription.
- Highly compact and light weight
- Modbus communication
- High level of Electromagnetic compatibility (EMC) i.e. maximum immunity to interferences.
- Self-Extinguishing plastic housing.

Layout & Mounting

Klemsan alarm annunciators are suitable for panel mounting for 96x96mm or 144x144m standarts.



ANC-8 Alarm Annunciator

Alarm Monitoring for Steel Plants

Alarm points for various parameters such as pressures, flow temperatures, speeds for different turbines.

ALARM MANAGEMENT
ANC series

Alarm Status of Battery-Backup System

Backup batteries power can be checked automaticlly with their internal alarm system. When their alarm status wants to be monitored over PC, ANC series present best solution thanks to its modbus communication.

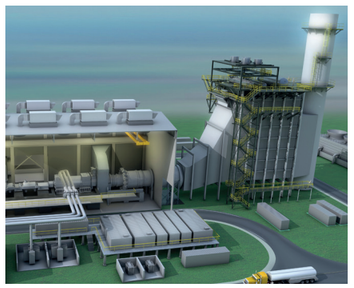
ALARM MONITORING over MODBUS
ANC series

Facility Monitoring

When power, UPS, generator, temperature/humidity, Fire/ Smoke, MVAC, Leak Detection etc. problems are existed, they all can be monitored over PC with modbus communication.

SIGNAL MONITORING over PC
ANC series

Natural Gas Power Stations



Faults of gas turbine, steam turbine, cooling water supply, power lines, generator etc. can be monitored instantaneously with signal inputs.

SIGNAL MONITORING
LSK Series

Pumping Stations

Monitoring pump position and controlling by means of output relays

CONTROLLING PUMP POSITION
ALRC-6

Electrical Control Room

Providing an immediate fault recognition, fault identification and a visual/audible alarm in order to call attention to an abnormal process condition.

CONTROL MANAGEMENT
ANC series

Panel Indicator Lights

Instead of using separate alarm indicator lights, using signal modules gives you opportunity to save space and installation time with monitoring all signals in same window.

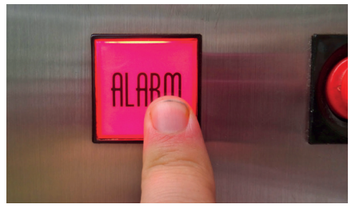
SIGNAL MONITORING
LSK Series

Level Monitoring with Level Switches

Immediately monitoring over PC when certain levels are reached with using liquid level switches.

MONITORING and CONTROLLING
ALRC-6

Fault Detection



Monitoring process faults with alarm relay controller provides you to stop them rapidly in order to prevent much worse condition thanks to alarm relay outputs.

ALARM MANAGEMENT
ALRC-6

Dimensional Drawings

ANC series / Signal Control

There are 4 kinds of flashing of LED displays; fast blinking, slow blinking, continuously flashing (turn on continuously) and turn off.

For ANC8 the first alarm / for ANC16 the first or the last alarm (depending on setting) display blinks faster than the remaining channel displays which also have an alarm condition.

Assume there is an alarm in the 3rd channel. Third channel's display will blink fast. After a while, assume that there appear alarms in 7th, 8th and 9th channels. Then third channel will blink fast; seventh, eighth and ninth displays will blink slowly.

When the operator presses on the "Ack" button, all the channels (only the 3rd channel other channels already blink slowly) will blink slowly and also the related relay(s) deactivate(s) (horn and/or alarm relay – depending on the setting). After that; if alarm conditions disappeared, slow blinking channels will flash continuously (LEDs turn on continuously). In the above condition, when the operator presses "Del" button; all the continuously flashing displays will turn off.

e.g.

Input-1 is adjusted as horn(green) window and input-2 is adjusted as alarm(red) window in below figure.

when related signal is applied to first input channel, it will blink fastly in green colour in order to indicate first alarm. When related signal is applied to second channel, it blinks slowly in red colour.

If ACK(acknowledge) button is pressed, Horn and Alarm relay are de-activated. After pressing ACK button, if one of input signal is gone; it will blink constantly, otherwise it blinks slowly.

If Horn button is pressed, the buzzer will stop. Functional diagram is shown in below figure.

ALRC-6 series / Signal Control

Whenever any ALRC-6 input is excited, relay of that channel and horn relay are activated. If the related dip-switch (Alarm Relay Enable switch on the rear cover) is adjusted as ON, "alarm relay" will also be activated. If input signal is continued, display of the related channel blinks. If input signal is disconnected, display will be turned on continuously.

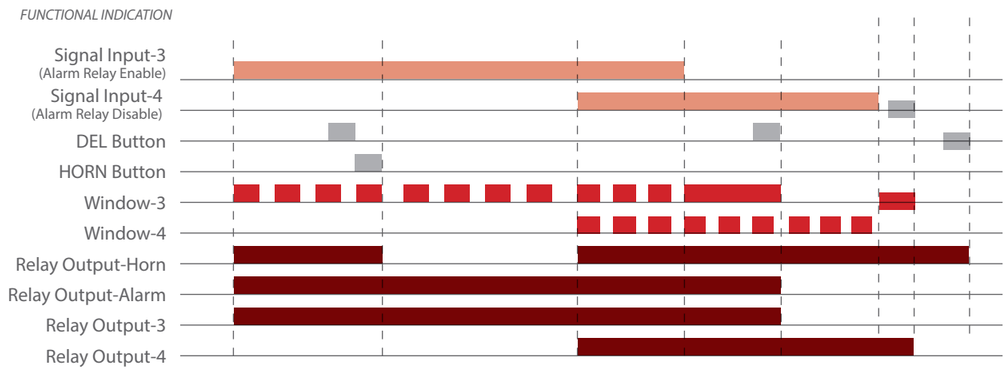
When HORN button is pressed, the HORN relay will be inactive. When a 'new' input signal is applied to any of the inputs, HORN relay will again be active.

When DEL button is pressed, relays of the channels whose input signals are interrupted will be inactive and displays of these channels will turn-off. For the channels whose input signals are continued, displays and relays maintain their initial state, as described above (relay active, display blinking).

When TEST button is pressed, displays of all channels will flash. This button has no effect on channel relays.

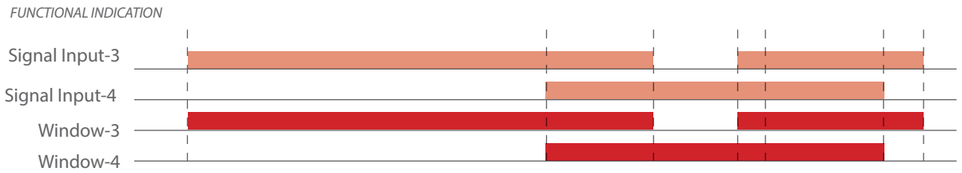
e.g.

Dip switch-3 is adjusted as "ON" and Dip switch-4 is adjusted as "OFF" in below figure.



LSK series/ Signal Visualizing

When input signal is applied to input channel of LSK series, related window is turned on constantly in red colour. When the signal is gone, related window is turned off.



Analog Signal
Management Solutions

Isolation with accurate conversion

Defining a transducer in simple terms

A transducer is an electronic device that changes one form of energy into another.
It provides conversion of main electrical parameters into a voltage or mA output and isolation between inputs and outputs.

Which actions are executed?

Measuring
Converting
Protection
Isolation
Configuration

A transducer measures input parameters and converts them to another signal form continuosly.

Input, output and power supply(optional) are electrically isolated from one another in order to provide protective isolation.

It is possible to configure different input ranges and output types by means of adjustment knobs.

Which markets are they used frequently?

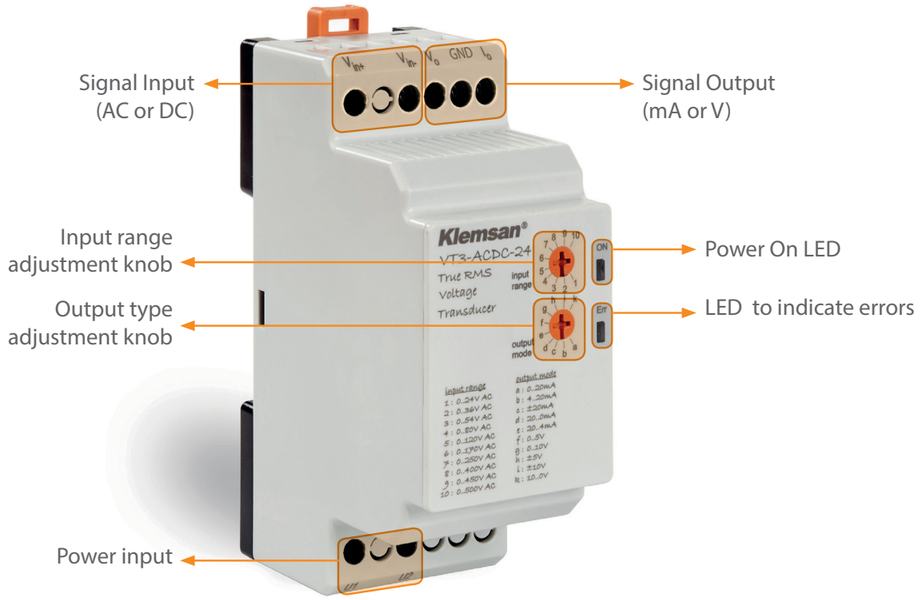
- Renewable Energy
- Medium motors
- Electric power plants and substations
- Telecontrol systems
- Industial Process
- Energy management systems
- Medium voltage modular cabinets
- Control and safety systems
- Telecontrol systems

Benefits and Advantages

- Extended measuring range
- Excellent linearity
- High system safety and reliability
- Electrical isolation with a high test voltage
- No insertion losses
- Low residual noise
- Good overall accuracy
- High quality, long useful life
- Easy configuration with knobs
- Without power suppy option
- Extended temperature input range
- Multiplying analog signal (1 in-2 outs)
- DC and AC supply voltage options
- Highly compact and light weight
- High level of Electromagnetic compatibility (EMC) i.e. maximum immunity to interferences.
- Self-Extinguishing plastic housing.

Layout & Mounting

Klemsan transducers are suitable for snap mounting onto 35mm standards DIN rails.



VT3-ACDC-24 Transducer

Renewable Energies

Measuring current and voltage in order to help the windmills and solar installations to work at their maximum efficiency.

SIGNAL CONVERTING

VT3-ACDC-24

Petrochemical processing

The measurement of temperature is a vital part of instrumentation in petrochemical industries. RTD sensors are often used for their excellent temperature response. They are used in order to combine sensors with PLC/Scada system.

SIGNAL CONVERTING

TT-RTD series

Ascon series

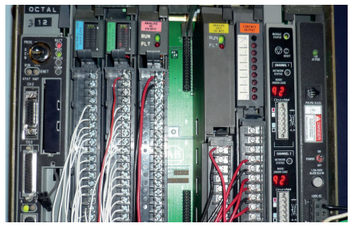
UPS Voltage Control

Inverter output voltage for UPS systems can be monitored by scada system via voltage transducers.

SIGNAL CONVERTING

VT3-ACDC-24

I/O applications



Passive isolators are used for the electrical isolation and converting of analog 0(4) to 20 mA standard current signals to 0-20mA, 4-20mA, 0-5V and 0-10V signals. They provide electrical isolation between the control electronics and process I/O and eleminate measurement errors caused by differences in earth potentials.

SIGNAL ISOLATING

PISO-DC series

Substation Automation

Conversion voltage and current of measurands, integration them with SCADA and RTU system.

SIGNAL CONVERTING

CT3 & VT3 series

Ascon 311

Refrigeration applications

Food products, fresh meats and produce, and stored items require strict environmental conditions for storage. That's why it is required reliable low temperature measurements. Providing down to minus 50 degree provides appropriate scale for any operation.

SIGNAL CONVERTING

TT-RTD series

Ascon321- Ascon 331

Elevators

With higher accuracy and speed, the feedback signal from transducers enables smoother control and energy consumption reduction of many electrical systems.

SIGNAL CONVERTING

CT3 series

On Board Automation for Railways

The electrical power is supplied to the trains via the catenaries. So, depanding on the train type such as subway, trolleybuses, high speed train, heavy traction etc. the locomotives can operate at different voltage levels. In order to monitor them in main panel, voltage transducers are used.

SIGNAL CONVERTING

VT3 series

Ascon 311

Scada System

The rms value of the input AC voltage or current can be converted to a DC output which is connected to analog input of PLC module. So it is possible to monitored them by Scada System.

SIGNAL CONVERTING

CT3 & VT3 series

Ascon series

Air conditioning and liquid temperature measurement

RTDs provide wide temperature input range from -50°C to +300°C in order to keep an industrial process in desired degree with accuracy and stability.

SIGNAL CONVERTING

TT-RTD series

Air Conditioning System

Monitoring of lower voltage levels and heavy load control with PLC modules.

PROTECTION

CT3 & VT3 series

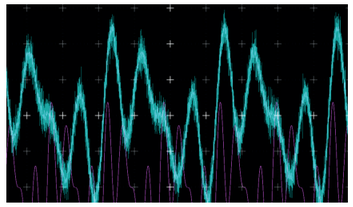
Motor Traction Control

Traction is provided by electric motors driven by inverters that are relying on transducers to measure, optimize and adjust the current and voltage that are sent to the motors, improving both performance and reliability.

PROTECTION

CT3 & VT3 series

Space-critical multi-channel applications



Providing two signal outputs for different control units thanks to 1-in 2-out converting feature. No auxiliary power supply is required for PISO series therefore cost savings are made.

SIGNAL MULTIPLYING

PISO-DC-DUO series

Tele-Control System

Providing an intelligent analog output module for the direct measurement of alternating variables for the use in station control applications.

SIGNAL CONVERTING

CT3 & VT3 series

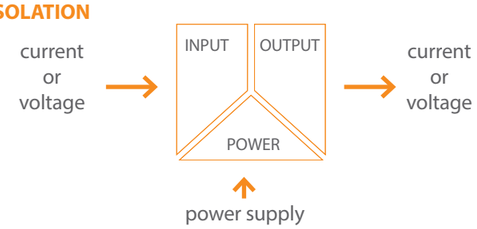
ASCON 311 / Converting

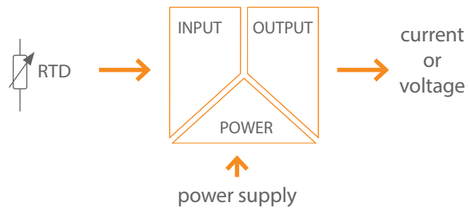
ISOLATION



ASCON 311 measure AC Current/ Voltage and converts it to an industry standard output signal which is directly proportional to the measured input. These transducers provide an output which is load independent and isolated from the input. Input range and output type must be adjusted before use them.

ASCON 321 / Converting

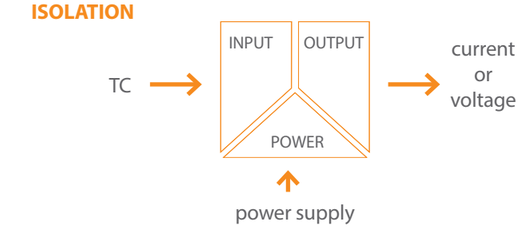
ISOLATION



RTD's provide wide temperature input range from -150°C to +800°C when accuracy and stability are a requirement of the customer's specification in an industrial process in order to keep it in desired degree.

ASCON 331 / Converting

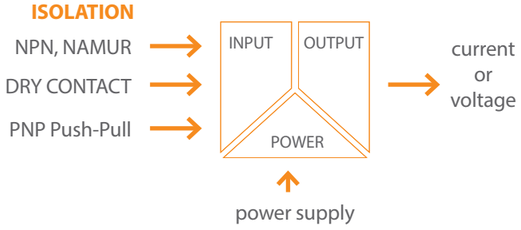
ISOLATION



Measurement of temperature is a vital part of instrumentation in petrochemical industries, heating systems, refrigerating applications etc. Termocouple sensors are often used for their excellent temperature response. ASCON 331 presents best solution with combining TC sensors with PLC/ Scada system.

ASCON 341 / Converting

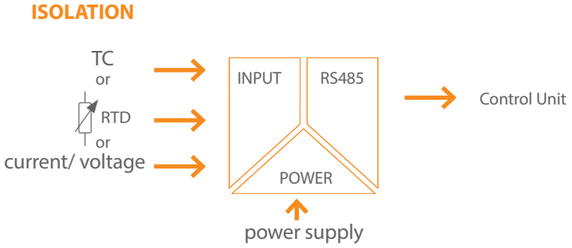
ISOLATION



Frequency converters convert frequency into analogue standard signals. The configurable frequency transducer is suitable for the connection of NAMUR proximity sensors as well as for sensors with NPN, PNP and Push-Pull outputs, Dry Contact as well. Configurable via adjustment knobs and teach-in knob. ASCON 341 has screw connection and standard configuration.

ASCON 352 / Signal-Temperature Converting / RS485 Communication

ISOLATION



ASCON 352 involves all input ranges which are indicated on above ASCON types. Measured values can be transmitted to a PC through serial communication so that real time analog signal monitoring without PLC analog card is possible.

Modbus RTU Descriptions

Modbus Table

Input value	40001	RO	32 bit float	03H
Ambient temprature	40003	RO	32 bit float	03H
Input type	40005	R/W	32 bit integer	03H / 10H
Input type - option 1	40007	R/W	32 bit integer	03H / 10H
Input type - option 2	40009	R/W	32 bit integer	03H / 10H
Input type - option 3	40011	R/W	32 bit integer	03H / 10H
Baudrate	40013	R/W	32 bit integer	03H / 10H

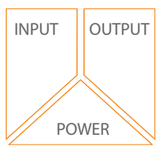
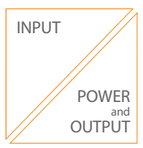
CT3 series / Converting

ISOLATION

CT3-AC, CT3-AC-24



CT3-AC-LP



CT3 series transducers measure AC Current and converts it to an industry standard output signal which is directly proportional to the measured input. These transducers provide an output which is load independent and isolated from the input. Input range and output type must be adjusted before use them.

LED INDICATION

Failure Status	LED Indication

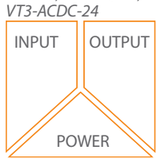
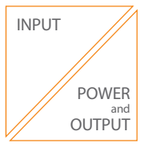
VT3 series / Converting

ISOLATION

VT3-AC, VT3-AC-24, VT3-ACDC-24



VT3-AC-LP



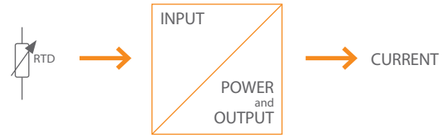
VT3 series transducers measure AC or DC(optional) voltage and converts it to an industry standard output signal which is directly proportional to the measured input. These transducers provide an output which is load independent and isolated from the input. Input range and output type must be adjusted before use them.

LED INDICATION

Failure Status	LED Indication
Voltage Output Mode: Short Circuit	Err:
Current Output Mode: Open Circuit	Err:
No Signal	ON:

TT-RTD series / Converting

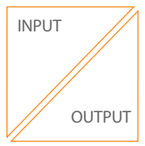
NO ISOLATION



TT-RTD series transducers convert temperature signals from PT100 sensors to an industry standard output signal (4-20mA) which is directly proportional to the measured input.

Passive Isolator series / Isolating

ISOLATION



Passive signal isolator series serve to electrically isolate the analog DC signal in the range from 0-20 or 4-20mA which depending on version, then converted it to 0-20 mA, 4-20mA, 0-5V, 0-10V. It does not require an external power supply. These transducers provide an output which is load independent and isolated from the input.

Switching
Management Solutions

Industrial
switching
with wide range

Defining an interface relay in simple terms

An interface relay is an electromagnetic switch operated by a relatively small electric current that can turn on or off a much larger electric current.

Which actions are executed?

Switching
Protection
Controlling
Filtering **Isolation**

An interface relay is an electrically operated switch that is used where it is necesarry to control a circuit by a low-power signal.

It provides complete electrical protective isolation between control and controlled circuits.

Filtering AC power input signals in order to prevent leakage current.

Saving money and increasing efficiency for PLC outputs.

Reduced PLC outputs to meet energy consumption goals.

Which markets are they used frequently?

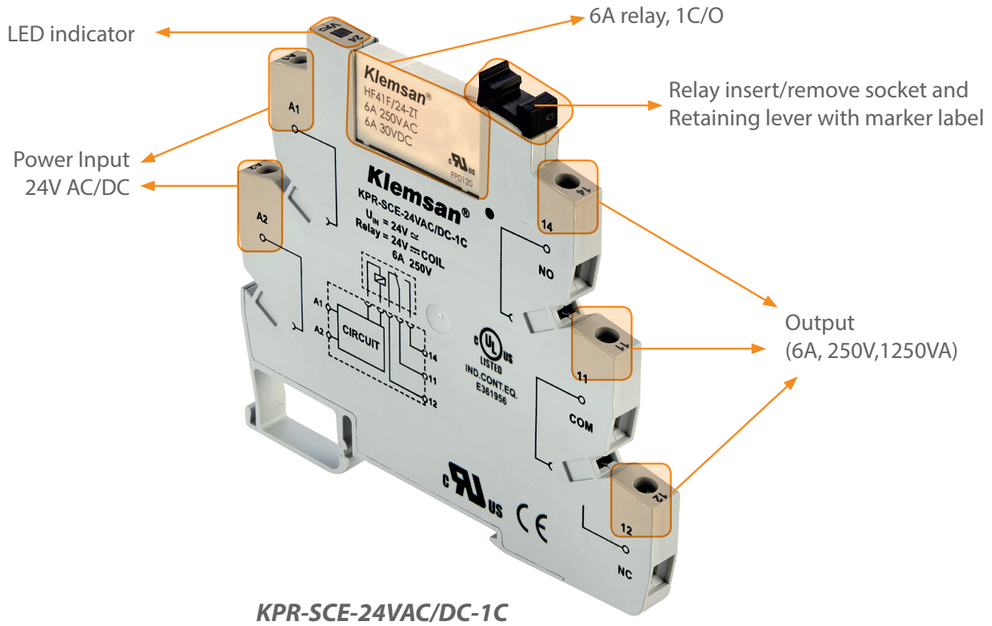
- PLC automation systems
- Electric power plants
- Energy management systems
- Medium Voltage Panels
- Industrial Machines

Benefits and Advantages

- A widely range of power input from 6V to 230V
- DC and AC supply voltage options
- Integrated RCZ filter option
- Saving wiring time with plug-in bridges
- High quality, long useful life
- Saving space with 6.2mm design
- LED status indicator in order to see actual movement of the contacts
- Labeling with terminal block marking materials
- Highly compact and light weight
- High level of Electromagnetic compatibility (EMC) i.e. maximum immunity to interferences.
- Self-Extinguishing plastic housing
- UL certificate

Layout & Mounting

Klemsan interface relays are suitable for snap mounting onto 35 mm standards DIN rails.



KPR-SCE-24VAC/DC-1C

Automation System

Reduced PLC outputs to meet energy consumption goals

I/O CONTROL
All models

Machine Control and Safety

Provides isolation between control and controlled circuits .

ISOLATION
All models

Scada System

Lenghten PLC outputs lifes by using interface relay to turn many devices on and off simultaneously.

I/O CONTROL
All models

Control Panels

It provides to control more than one load with extrarnal pluggable bridges.

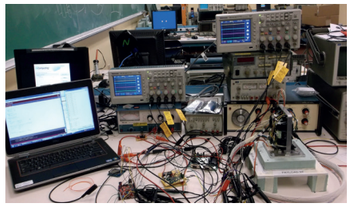
I/O CONTROL
All models

Chemical Industry

Safe isolation between inputs and outputs for pumps, compressors and air conditioning applications.

CONTROLLING
All models

Electrical Test Systems

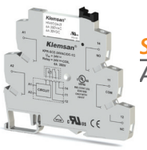


The interface between test equipment and systemI/O devices with a high switching capacity.

CONTROLLING
All models

Pneumatic Control

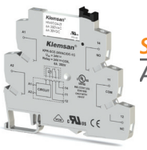
Switching currents or voltage too high for PLC outputs to handle.



SWITCHING
All models

Tight Cabinets

Only 6.2 mm wide, thus saving considerable space in your enclosures.



SPACE SAVING
All models

Leakage Current Applications

Preventing to stuck in “ON” state while the relay is switched as “OFF” which is caused by leakage current.

SWITCHING
KPR-SCF series

2C PLC Relays

Defining an interface relay in simple terms

An interface relay is an electromagnetic switch operated by a relatively small electric current that can turn on or off a much larger electric current.

Which actions are executed?

Switching
Protection
Controlling
Filtering **Isolation**

An interface relay is an electrically operated switch that is used where it is necesarry to control a circuit by a low-power signal.

It provides complete electrical protective isolation between control and controlled circuits.

Filtering AC power input signals in order to prevent leakage current.

Saving money and increasing efficiency for PLC outputs.

Reduced PLC outputs to meet energy consumption goals.

Which markets are they used frequently?

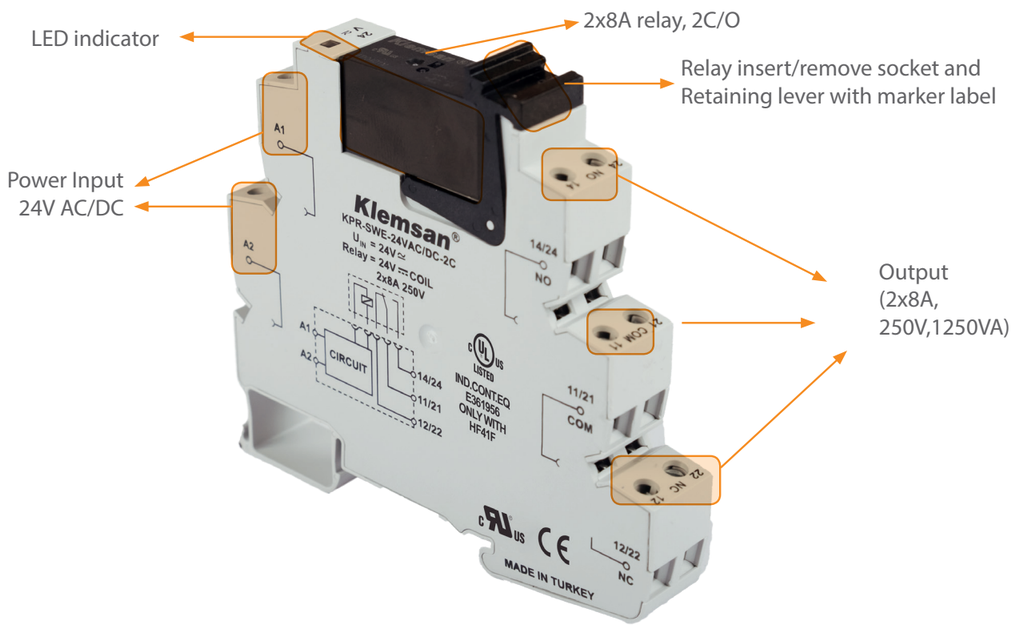
- PLC automation systems
- Electric power plants
- Energy management systems
- Medium Voltage Panels
- Industrial Machines

Benefits and Advantages

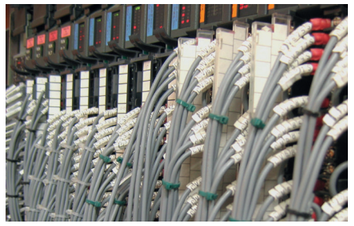
- A widely range of power input from 6V to 230V
- DC and AC supply voltage options
- Integrated RCZ filter option
- Saving wiring time with plug-in bridges
- High quality, long useful life
- Saving space with 14mm design
- LED status indicator in order to see actual movement of the contacts
- Labeling with terminal block marking materials
- Highly compact and light weight
- High level of Electromagnetic compatibility (EMC) i.e. maximum immunity to interferences.
- Self-Extinguishing plastic housing
- UL certificate

Layout & Mounting

Klemsan interface relays are suitable for snap mounting onto 35 mm standards DIN rails.



Automation System



Reduced PLC outputs to meet energy consumption goals

I/O CONTROL
All models

Machine Control and Safety

Provides isolation between control and controlled circuits .

ISOLATION
All models

Scada System

Lenghten PLC outputs lifes by using interface relay to turn many devices on and off simultaneously.

I/O CONTROL
All models

Control Panels

It provides to control more than one load with extrarnal pluggable bridges.

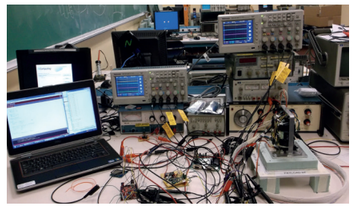
I/O CONTROL
All models

Chemical Industry

Safe isolation between inputs and outputs for pumps, compressors and air conditioning applications.

CONTROLLING
All models

Electrical Test Systems



The interface between test equipment and systemI/O devices with a high switching capacity.

CONTROLLING
All models

Pneumatic Control

Switching currents or voltage too high for PLC outputs to handle.

SWITCHING
All models

Tight Cabinets

Only 6.2 mm wide, thus saving considerable space in your enclosures.

SPACE SAVING
All models

Leakage Current Applications

Preventing to stuck in “ON” state while the relay is switched as “OFF” which is caused by leakage current.

SWITCHING
KPR-SCF series

Defining Interface Relays in simple terms

An interface relay is an electromagnetic switch operated by a relatively small electric current that can turn on or off a much larger electric current. An interface relay is an electrically operated switch that is used where it is necesarry to control a circuit by a low-power signal. It provides complete electrical protective isolation between control and controlled circuits. Filtering AC power input signals in order to prevent leakage current.

Which actions are executed?

Switching
Controlling
Filtering Isolation

An interface relay is an electrically operated switch that is used where it is necesarry to control a circuit by a low-power signal. It provides complete electrical protective isolation between control and controlled circuits. Filtering AC power input signals in order to prevent leakage current.

Which markets are they used frequently?

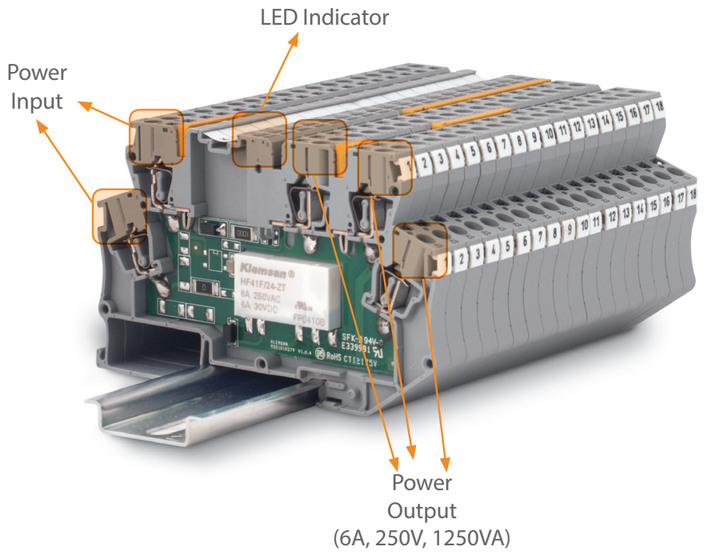
- PLC automation systems
- Industrial Machines
- Control and protection systems
- Energy management systems
- Electric power plants
- Medium voltage modular systems

Benefits and Advantages

- Wide range of power input from 6 V to 230 V
- AC, DC and AC/DC input voltage options
- Spring clamp connection
- Integrated RCZ filter option
- Saving time with plug-in bridged
- High quality, long usage life
- Space-saving 6.2 mm design
- LED status indicator to see actual movements of the contacts
- Labelling with terminal block marking equipments
- Highly compact and lightweight
- High level of electromagnetic compability (EMC)
- Maximum immunity to interfrences
- Self-extinguishing plastic housing

Layout & Mounting

Klemsan interface relays are suitable for snap mounting onto 35 mm standards DIN rails.

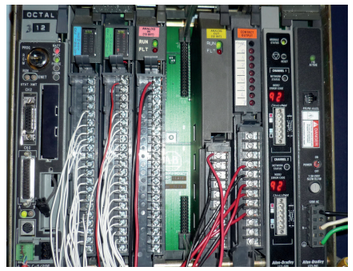


SCADA System

Lenghten PLC outputs lifes by using interface relay to turn many devices on and off simultaneously.

I/O CONTROL
All models

Tight Cabinets



Only 6.2 mm wide, thus saving considerable space in your enclosures. Especially suitable for use in switchgear cabinets to use the space in the most efficient way, equipment and machine modification and extend the lifetime.

SPACE SAVING
All models

Under Vibration

Balances the bad effects of vibration and keep switching with its spring clamp connection. Provides unintended operation for all systems.

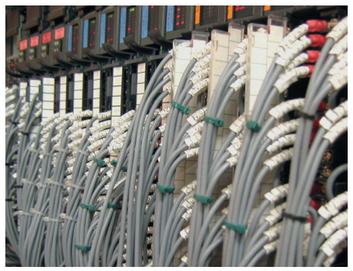
SWITCHING
All models

Pneumatic Control

Switching currents or voltage too high for PLC outputs to handle.

AMPLIFICATION
All models

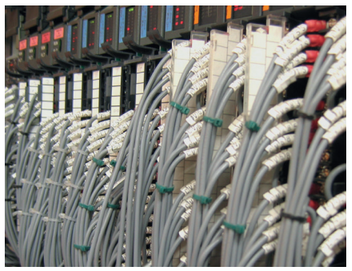
Current Leakage Applications



Preventing to stuck in "ON" state while the relay is switched as "OFF" which is caused by leakage current.

FILTERING
All models

Machine Control and Safety



Prevents isolations between input and control circuits

ISOLATION
All models

Defining OPK-EKI modules in simple terms

OPK-EKI is an optocoupler module that uses a short optical transmission path to transfer an electrical signal between circuits or elements of a circuit, while keeping them electrically isolated from each other. They can be used to switch loads like mechanical relays but they are much more than simply switching…

Which actions are executed?

Switching
prevents inrush current
Controlling
Driving **Isolation**

OPK-EKI module is an electrically operated switch that is used where it is necesarry to control a circuit by a low-power signal.

The main purpose of an optocoupler is to prevent rapidly changing voltages or high voltages on one side of a circuit from distorting transmissions or damaging components on the other side of the circuit. It uses light waves to provide complete electrical isolation between control and controlled circuits while transferring an electrical signal.

Zero volt switching circuit prevents inrush current so loads can be switched more stable.

High side and low side switching option allows driving a load in two different ways.

Which markets are they used frequently?

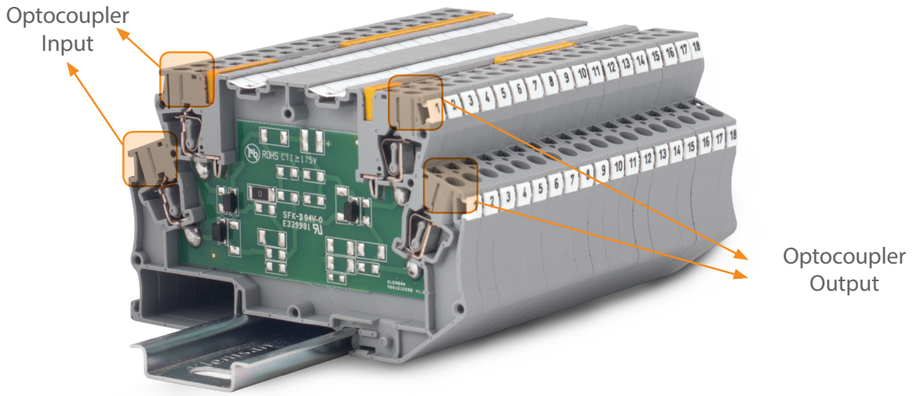
- PLC automation systems
- Industrial Machines
- Control and safety systems
- Energy management systems
- Electric power plants
- Medium voltage modular cabinets

Benefits and Advantages

- A widely range of voltage input from 5V to 220V
- Providing high switching frequency due to short switch-on and switch-off times
- Long service life
- Quite working
- No contact arching
- Resistant to vibration and shock
- Preventing inrush current
- High side and low side switching options
- AC and DC load switching options
- Cage clamp connection
- Saving space with 6.2mm design
- Saving wiring time with plug-in bridges
- LED status indicator in order to see actual movement of the contacts
- Self-Extinguishing plastic housing
- Labeling with terminal block marking materials

Layout & Mounting

Klemsan interface relays are suitable for snap mounting onto 35 mm standards DIN rails.



Industrial Applications

Optocoupler modules are used in industrial environments where high voltages, magnetic fields and noise are commonly present, reliability is critical to avoid downtime and ensure data accuracy. In this environment circuit designers use optocouplers to insulate high voltages and isolate unwanted signals.
Klemsan presents OPK-EKI modules that are designed to meet the stringent requirements of industrial applications.

ISOLATION and AMPLIFICATION
All models

Solid State Relay Applications

OPK-EKI modules can be used instead of solid state relays due to high switching frequency, short switch-on and switch-off times, no contact bouncing, noisless switching, long operation

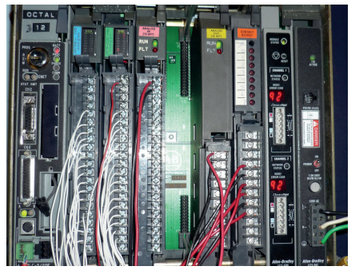
I/O CONTROL
All models

Under Vibration

Klemsan OPK-EKI modules compensate the bad effects of vibration and shock and continue to switch current and voltage thanks to their cage clamp connection and having no moving parts like electromechanical relays.
They ensure continuous and uninterrupted operation for any system.

SWITCHING
All models

Narrow Cabinets



Only 6.2 mm wide, thus saving considerable space in your enclosures. OPK-EKI modules are particularly suitable for the modification and extension of equipment and machinery, where it helps to make optimum use of the limited space available in switchgear cabinets.

SPACE SAVING

Communication
Management Solutions

Made to communicate

Defining an ethernet gateway in simple terms

An ethernet gateway is an automation device which converts between serial to ethernet, GPRS or WI - FI protocols in order to monitor and control serial devices. over internet network or ethernet based devices over serial network

Which actions are executed?

Converting the data
Fast data transmission
Querying simultaneously
Bidirectional working
Protective Isolation
Dual-mode conf iguration
Ping blocking
Auto-learning IP address

An ethernet gateway coverts the data between different protocols and supports system integrators by ensuring a consistent flow of information throughout the entire facility. Etor,Wtor and Gtor gateway provides fast data transmission for serial devices up to 115Kbps. Simultaneous queries that belong to 6 different users can be replied by 64 slave devices over one Etor-4, Gtor and Wtor gateway. It is possible to control serial devices over internet network(server mode) or ethernet based devices over serial interface(client mode) thanks to bidirectional working feature. The integrated galvanic isolation between ethernet, modbus and supply parts provides line protection against over voltage and the anti-noise circuit eliminates the effects of EMI. It has ability to be conf igured over USB or Web server thanks to dual-mode conf iguration. Ping queries from unauthorized people can be prevented thus your network can be secured, thanks to ping blocking feature. Auto-learning IP address feature allows you to adopt ethernet gateway ETOR to your system more easily.

Which markets are they used frequently?

- Electrical power plants and substations
- PLC-Scada applications
- Submetering station
- Building automation
- Food and agriculture industry
- Railway automation
- Machine tool industry
- IT centres
- Alarm station
- Production line management

Benefits and Advantages

- First Class quality to fulf ill all your communication needs
- Quick view of status with leds
- Line protection by galvanic isolation
- Isolates noise on Remote I/O cable for improved communications
- Bidirectional protocol converting; client and server mode
- Ethernet-RS485 and Ethernet-RS232 options
- Supports 6 simultaneous TCP masters with up to 64 simultaneous serial slave devices
- Multi-Slave gateway solutions for large data transfers
- Converting between Modbus TCP and Modbus RTU/ASCII
- Easy conf iguration over USB or Web Server
- User friendly conf iguration software
- 300-115200 bps baudrate adjustment
- Dual supply option: 18-50VAC/DC or can be powered up through a mini USB cable
- Automatic or manual IP addressing
- Ping blocking
- High mechanical endurance
- Sleek 17.5mm wide housing and compact design saves panel space.
- Perfect to f it in modular enclosure
- Self-Extinguishing plastic housing
- High level of Electromagnetic compatibility (EMC) i.e. maximum immunity to interferences.

Layout & Mounting

Klemsan interface relays are suitable for snap mounting onto 35 mm standards DIN rails.

ETOR-4 Ethernet Gateway - WTOR WI - FI Gateway - GTOR GPRS Gateway

Data Center Management

ETHERNET GATEWAY
ETOR-4, ETOR-2, GTOR, WTOR

Efficiency of IT infrastructure depends on accessing, monitoring, and managing IT equipment remotely. Although some equipments may be installed in data center, need of support remote offices, factory floors or other unattended locations, is also important. Many devices have a serial port for making configuration changes or uploading new firmware. However, visiting remote equipment cabinets with a serial cable and laptop is a time-consuming and expensive task. KLEMSAN gateways bridge the distance between remote IT equipment and data center. Costs and cut downtime can be reduced by allowing remote access.

Wastewater Treatment Plants

ETHERNET GATEWAY
ETOR-4, GTOR, WTOR

Because of the dynamic nature of many water treatment systems and the worldwide need for improved reliability and quality, a higher degree of precision is required in the monitoring and control of water treatment programs than that obtained through manual monitoring. To achieve the degree of precision needed, continuous on-line monitoring with automatic instrumentation is required. Most of engineers use radio modems to collect RTU system data in Modbus RTU format. However, since most SCADA monitors use Modbus TCP for remote monitoring, a gateway is used to connect the two protocols.

Factory Automation

ETHERNET GATEWAY
ETOR-4, ETOR-2, WTOR, GTOR

TCP/IP is widely used in many electrical systems for remote monitoring to ensure reliable performance and energy control. Although systems and equipments can often be managed from the network itself, such access may not always be possible. The problem comes when such equipment doesn't support TCP/IP protocol. It is an option to modify these devices with TCP/IP versions but it may be too expensive and sometimes not possible. Fortunately, most of electrical devices, computers, equipments provide a serial port for local access. Users are able to have access from anywhere, just as if they were connected locally through a serial connection. So that's why gateways have become a popular way to achieve TCP/IP requirements.

Power Generation System

ETHERNET GATEWAY
ETOR-4, ETOR-2, WTOR

Generally, power plants have their own generation system in order to provide uninterrupted power supply. It is highly important to get data continuously from power RTUs, smart electronic devices, energy measuring devices which support serial communication and transmit them to TCP network which is required to reach those information from anywhere in the world. At this point, Etor gateways present best solution between serial devices and TCP network.

Industrial Motors

ETHERNET GATEWAY
ETOR-4, ETOR-2, GTOR, WTOR

The consumption of industrial motors should be monitored carefully by energy meters that are located throughout the facility because they use a significant amount of energy, with many factories spending 70% of their total production budget on this expense. Generally meters support Modbus RTU protocol so the data from the meters is transmitted via an industrial gateway to a Modbus TCP network and monitored any place in the world.

Energy Metering Applications

ETHERNET GATEWAY
ETOR-4, ETOR-2, GTOR, WTOR

These days most of energy meters support RS232 or RS485 communication protocols. Human efforts and wasted time that are spend for meter readings can be reduced by using remote monitoring system and Etor gateway.

Multi-User & Multi-Device Applications

ETHERNET GATEWAY
ETOR-4, WTOR

Ethernet is a general purpose communication protocol that is very fast, can be used any purpose and can be found anywhere in the world. 6 users located from different places can connect to one gateway simultaneously and communicate up to 64 serial devices over one gateway. So ethernet gateway presents cost-effective solution for IP-based systems which are growing at a exponential rate nowadays.

Wind & Solar Power Plants

ETHERNET GATEWAY
ETOR-4, GTOR, WTOR

Renewable energy power plants are required to be monitored in long distance because of their locations. In order not transmission distance to become a problem, data should have transmitted through the ethernet gateways over TCP/IP protocol which provides safe, reliable and fast communication all over the world.

Oil and Gas Automation

ETHERNET GATEWAY
ETOR-4, ETOR-2, GTOR, WTOR

For most oil and gas industries, the need for accurate, real-time information obtained through a SCADA system is a must. These industrial facilities are looking to improve efficiencies in data communication by connecting serial devices which support RS485 or RS232 protocols. KLEMSAN gateways can be used to optimize efficiency, productivity, reliability, and safety at any stage of oil and gas production.

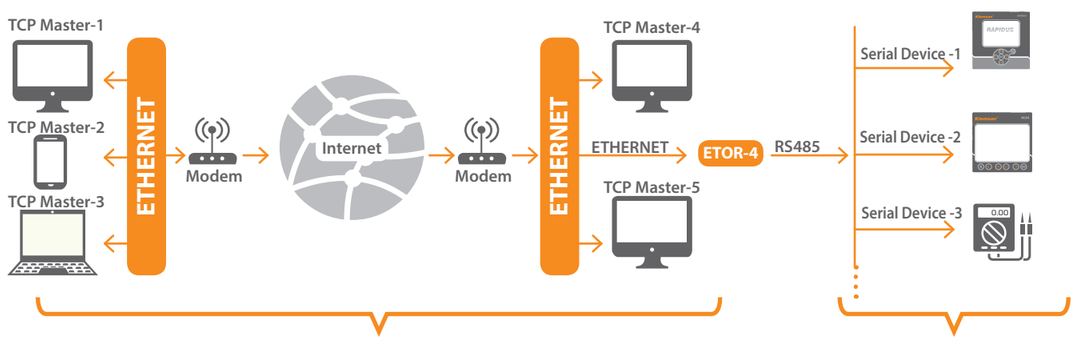
ETOR-4 / Ethernet-RS485 Bidirectional Converting

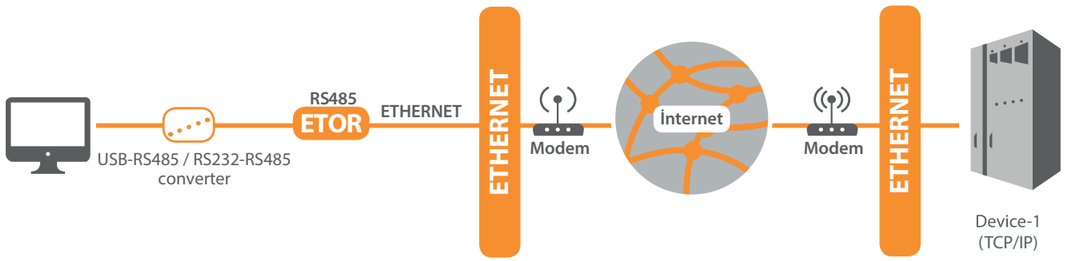
Server Mode

When running in the server mode; ETOR-4 converts the MODBUS TCP, MODBUS RTU over TCP and MODBUS ASCII over TCP queries to MODBUS RTU and MODBUS ASCII queries and transmits these queries to the serial devices. After that, it converts the responses which are received by slave devices, then transmits them to master devices. 6 TCP masters and 64 serial devices can be communicated simultaneously over one Etor-4 gateway in server mode.



Client Mode

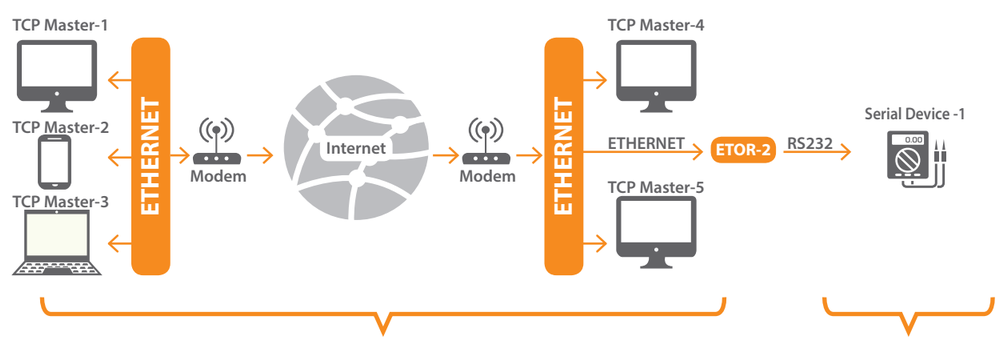
When running in the client mode; ETOR-4 converts the MODBUS RTU and MODBUS ASCII queries to MODBUS TCP, MODBUS RTU over TCP and MODBUS ASCII over TCP queries and transmits these queries to the remote device which is connected to the internet or the local network. After that, it converts the responses which are received by slave devices, then transmits them to master devices. 1 TCP master and 1 serial device can be communicated simultaneously over one Etor-4 gateway in client mode.



ETOR-2 / Ethernet-RS232 Bidirectional Converting

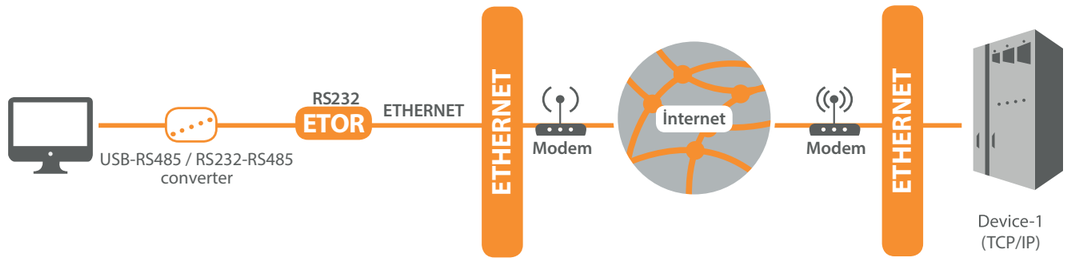
Server Mode

When running in the server mode; ETOR-2 converts the MODBUS TCP, MODBUS RTU over TCP and MODBUS ASCII over TCP queries to MODBUS RTU and MODBUS ASCII queries and transmits these queries to the serial device. After that, it converts the responses which are received by slave device, then transmits them to master devices. 6 TCP masters and 1 serial device can be communicated simultaneously over one Etor-2 gateway in server mode.



Client Mode

When running in the client mode; ETOR-2 converts the MODBUS RTU and MODBUS ASCII queries to MODBUS TCP, MODBUS RTU over TCP and MODBUS ASCII over TCP queries and transmits these queries to the remote device which is connected to the internet or the local network. After that, it converts the responses which are received by slave device, then transmits them to master device. 1 TCP master and 1 serial device can be communicated simultaneously over one Etor-2 gateway in client mode.



GTOR-4 / GPRS to RS485 Gateway

GTOR series products connect to serial MODBUS devices with TCP / IP based systems via GPRS service. In this way, it is possible to remotely control and monitor serial devices connected to MODBUS network via GPRS service. GTOR can be easily integrated into existing MODBUS networks thanks to their wide range of configuration options.GTOR series products works as a TCP / IP server. GTOR is user friendly with easy to configure and free interface program.

- Micro SIM Card
- Free user interface program
- RS485 interface
- 17,5mm width
- 8 LED indicators
- APN configuration with Mini USB
- Supports all operators
- Supports up to 64 devices

It provides configuration via USB or TCP / IP using GPRS service. The on-screen LED shows a lot of information such as power, signal strength level, operating status.

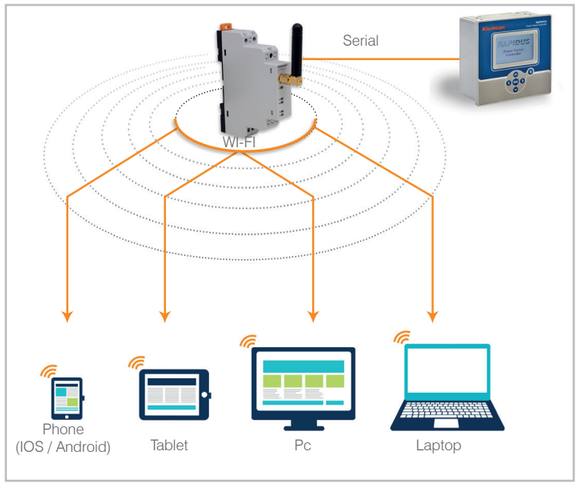
WTOR-4 / WI - FI to RS485 Gateway

WTOR series products connect to serial MODBUS devices with TCP / IP based systems via WI-FI service. In this way, it is possible to remotely control and monitor serial devices connected to MODBUS network via WI-FI service. WTOR can be easily integrated into existing MODBUS networks thanks to their wide range of configuration options. WTOR series products works as a TCP / IP server.

- Operating with Access
- Point or Station mode
- Configurating via web interface
- RS485
- 4 pcs. led indication
- Supports up to 64 devices
- 17,5mm wide

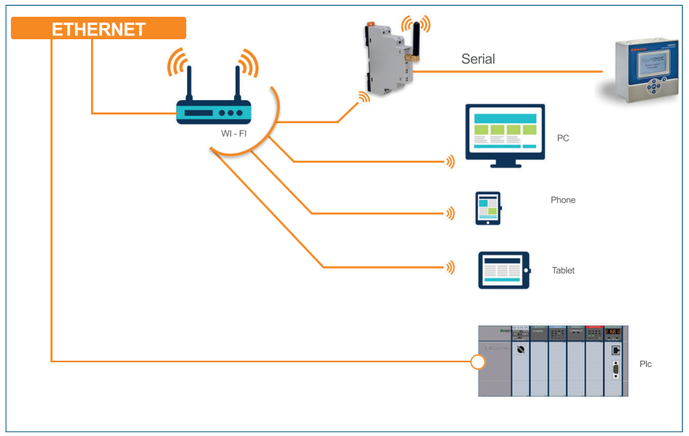
It provides configuration via web interface.The on-screen LED shows a lot of information such as power, mode information, operating status.

AP(Access Point) Mode



Where there is no established Wi-Fi network, the WTOR may create a Wi-Fi network. A single device can join the Wi-Fi network created by WTOR. Serial devices can be controlled and monitored in this way.

STA Mode:



Joins an external Wi-Fi router to connect serial devices to the existing Wi-Fi network. This way the serial devices can be controlled and monitored. The configuration page can be accessed by entering the IP address set for WTOR in the WEB browser of a computer joined to the same network, and the desired configuration settings can be made.

UTOR / USB to RS485,RS232 and TTL Converter

UTOR series products,

- USB to RS485
- USB to RS232
- Provides TTL conversion from USB.
- UTOR is powered from the USB port without the need for an external power supply. Unlike most converters, UTOR has an isolation barrier that provides electrical isolation between your computer and serial devices. This creates an ideal environment where equipment and data are critical.

Energy Monitoring
Solutions

More efficiency
than you expected

Defining an energy analyzer in simple terms

An energy analzer is an automation device which offers 3-phase energy monitoring, analyzing and controlling the network comprehensively. It enables advanced applications such as energy metering, data logging, DIO applications, transducer applications etc.

Which actions are executed?

An energy analyzer provides highly accurate measuring for main electrical parameters and expanded energy metering solutions for your electrical network.

All the data which are being measured or kept in its memory can be transmitted to remote monitoring system thanks to modbus communication.

It offers 3-phase energy and power measurement with data logging such as min/max/avg values, energy values, demand values etc. with date and time.

Digital inputs can be used for equipment status/position monitoring, activation second tariff which is used by generators or as a counter.

Digital outputs can be used to take an impulse which is synchronized with internal energy meters.

It provides conversion of main electrical parameters into DC voltage or DC mA outputs thanks to analogue outputs which can be easily programmed by the users.

Low/high limit thresholds for all electrical paramaters can be defined so load management in a network is possible by means of alarm relay outputs.

In dept-analysis of individual current and voltage harmonics in order to increase network quality.

Displaying signal waveforms for current and voltage phases to detect signal deviations which are observed in real time.

Detailed analyze of phase relationships between current and voltage lines thanks to phasor diagram feature.

Specifying run hours, on hours and power interruptions in order for your machines to be used more effectively.

Measuring

Phasor analyzing
Specifying hour meters

Which markets are they used frequently?

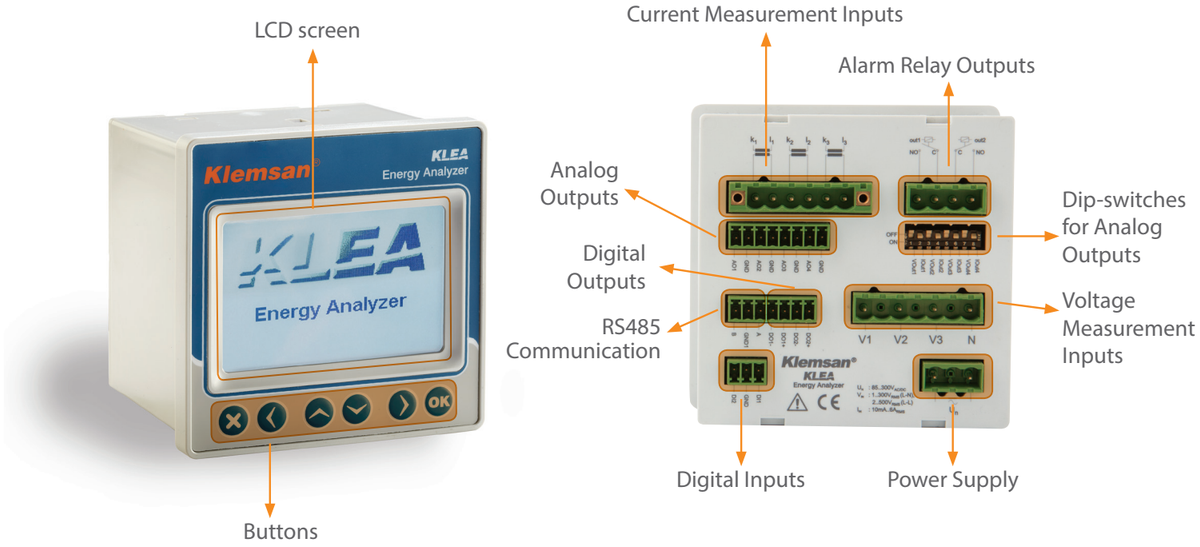
- Medium voltage modular cabinets
- Submetering station
- PLC-Scada applications
- Electrical power plants and substations
- Electric utilities
- Enery meter applications
- Infrastructure
- Alarm station
- IT centres
- High-rise buildings

Benefits and Advantages

- Current inputs can withstand surges up to 100 A for 1 second
- State of the art technology; moduler design, no connector cables, no fixing screws inside
- Panel or rail mount options
- 3 phase and 1 phase options
- Adjustable multi-tariff energy meter
- 4 quadrant measurement
- Harmonic measurement up to 51st
- Programmable analog outputs
- Programmable digital inputs and outputs
- Prgrammable alarm output
- Modbus communication
- Long distance visibility with super bright seven segment displays
- AC/DC power supply
- Real time clock
- Connection to current transformer x/1 A or x/5 A
- High measurement accuracy according to IEC standarts
- High level of Electromagnetic compatibility (EMC) i.e. maximum immunity to interferences
- Self-Extinguishing plastic housing.

Layout & Mounting

Klemsan measuring devices are suitable for panel mounting for 96x96mm standarts or for snap mounting onto 35 mm standards DIN rails.



KLEA 324P Energy Analyzer

Dual Source Energy Measurement

Recording and displaying the consumption of the energy from two different sources; network and generator. Users can set Tariff 2 to measure genset usage as a power supply so exact cost of the energy for network and genset can be identified more easily.

ENERGY ANALYZER
KLEA and POWYS series

Equipment Maintenance

Monitoring elapsed hours for equipment warranty, recording actual running hours for equipment resale, tracking running time for equipment service thanks to Run hour, On hour and Power interruption counter features.

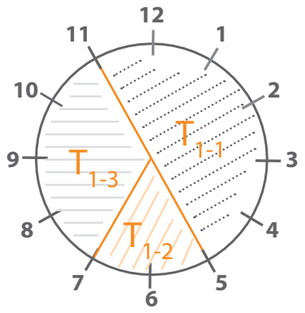
ENERGY ANALYZER
KLEA 110P
KLEA 220P
POWYS 3121 …

Buildings and Infrastructure

The main consumers can be identified by measuring the energy consumption of the various sub-assemblies in your buildings. So energy costs that belong to the departments can be managed and distributed between the various users thanks to submetering function. By correctly detecting peak demands in consumption gives you opportunity to reduce your electricity bills.

ANALYZER / MULTIMETER
KLEA, ECRAS and POWYS Series

Sub-metering Station



User can use these sub-tariffs in order to measure energy consumption for different shifts in a facility. In addition to Tariff 2, Tariff 1 is splitted into three pieces with adjustable start & end times for each sub-tariff.

ENERGY ANALYZER
KLEA 3xxx Series

PLC-Scada Applications

Conversion of measured electrical parameters such as voltage, current, active power, reactive power, frequency etc. can be converted to a DC output which is connected to analog input of PLC module by means of power transducer. So it is possible to integrate network measurands with a scada system.

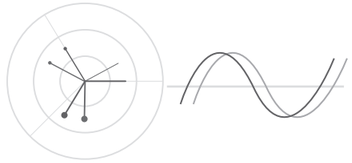
POWER TRANSDUCER
DNPT

Cost Management

Industry faces a never ending challenge to keep down its operating costs. One of the prerequisites for achieving this goal is to identify where costs occur. Energy analyzers present best solution to detect, analyze and prevent them thanks to their advanced multi-tariff meters and real time demand logs.

ENERGY ANALYZER
KLEA 3xxx Series

Signal Analyzing



Advanced monitoring of current and voltage waveforms, monitoring signal disturbances, detailed analyze of phase relationships.

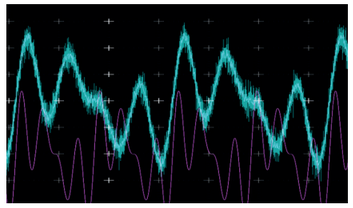
ENERGY ANALYZER
KLEA 3xxx Series

Remote Monitoring

All measured parameters are transmitted to a PC through RS485 so that keep you informed of system performance 24 hours per day. Parameters can be changed remotely and a variety of measured values can be monitored, analyzed and downloaded via a Web browser with using an energy management softwares and ethernet gateway from anywhere in the world.

ANALYZER / MULTIMETER
KLEA, ECRAS and POWYS Series

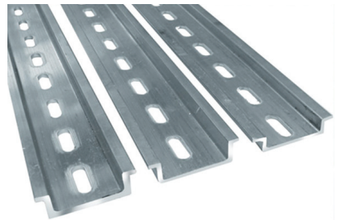
Pulse Concentration Applications



Klemsan energy analyzers offer several meters which are suitable all type of electrical networks. The pulse output function enables the kWh/kVArh consumption to be exported to a concentrator so that they can be analyzed for energy saving and billing purpuses.

ENERGY ANALYZER
KLEA and POWYS Series

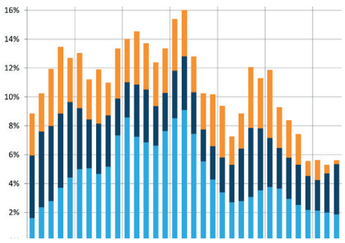
Din-Rail Applications



Installation costs are significantly decreased by the installation of measurement devices on a standart 35mm din-rail instead of mount them in a panel. This means that panel cut-out is no longer necesarry so time and energy can be saved.

ANALZER/ POWER TRANSDCUER
POWYS and DNPT Series

Demand Management



Measuring demand values for active power with date and time helps identifying time periods when energy use is very high so that unnecessary and unexpected costs can be detected and reduced.

ENERGY ANALYZER
KLEA 3xxx Series

Load Management by means of Alarm Outputs

Fully programmable alarm function for any electrical parameter which is measured by the product, gives you opportunity to define pickup setpoint, dropout setpoint and time delay in order to detect a fault condition and prevent it with activating alarm outputs before it's too late.

ANALYZER / MULTIMETER
KLEA, ECRAS and POWYS Series

Facility Management

DNPT series transducers provide all requirements of entire facility such as monitoring and conversion of mono/three phase electrical parameters, remote communication, 2 relay output, 2 DIO, 4 analog output, advanced multi-tariff energy meters. Briefly all power management needs are provided by only one product.

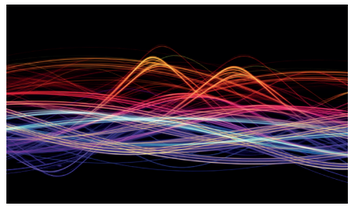
POWER TRANSDUCER
DNPT

Counting Quantities

Production quantity can be collected by a limit switch or a dry contact coming from a proximity sensor thanks to digital input feature.

ENERGY ANALYZER
KLEA and POWYS Series

Harmonic Management



Harmonics cause many problems for all sorts of equipment connected to the low voltage network. Before take the cost and and consequences of poor power quality, harmonics must be measured instantaneously and isolated from the source when it is necessary.

ENERGY ANALYZER
KLEA and POWYS Series

Fan Control

Assigning temperature value as an alarm paramater allows you to control temperature in a cabinet and prevents equipments from overheating thanks to integrated temperature sensor.

ENERGY ANALYZER
KLEA 3xxx Series

Data and Event Logging

Minimum, maximum and average values of measurements and consumption data are stored in non-volatile memory as hourly, daily and monthly. Plus, 50 alarm logs with time stamp allows you to analyze the malfunctions which were occured in the past.

ENERGY ANALYZER
KLEA 3xxx Series

Equipment Status Management

The status of a circuit breaker or a disconnector in an electrical power distrubution center can be monitored by means of digital inputs. According to digital input status(open or short circuit), simple Logic-0 or Logic-1 signal is sent to the PC through the modbus communication instantaneously.

ANALYZER / MULTIMETER
KLEA and POWYS Series

Electrical way of saving

Defining a power factor controller in simple terms

A power factor controller is an automation device which allows power distrubution system to operate at its maximum efficiency with reducing reactive power. This control process reduces the load requirement on the energy generation and transmission supply system.

Which actions are executed?

Switching capacitors and shunt reactors in order to compensate your system.

Learning voltage-current connections and correcting them when wrong connecting is detected.

Estimating exact step powers thanks to dynamic step monitoring feature.

Displaying switching cycles and connection times for capacitors and shunt reactors.

Activating target-2 cosØ, which is required by generators to work their maximum efficiency thanks to generator input.

Provides highly accurate measuring for main electrical parameters and energy metering solutions for your electrical network.

Measuring
Phasor analyzing
Metering
Communicating
Alarming
Harmonic monitoring
Compensation
Data logging
Dynamic capacitor monitoring
Learning
Displaying Switching Cycles
Activating target-2 cosØ

All the data which are being measured or kept in its memory, can be transmitted to remote monitoring system thanks to modbus communication.

It offers 3-phase energy and power measurement with data logging such as min/max/avg values, energy values, demand values etc. with date and time.

Low/high limit thresholds for all paramaters can be defined so load management is possible by means of alarm relay outputs.

In dept-analysis of individual current and voltage harmonics in order to increase network quality.

Detailed analyze of phase relationships between current and voltage lines thanks to phasor diagram feature.

Which markets are they used frequently?

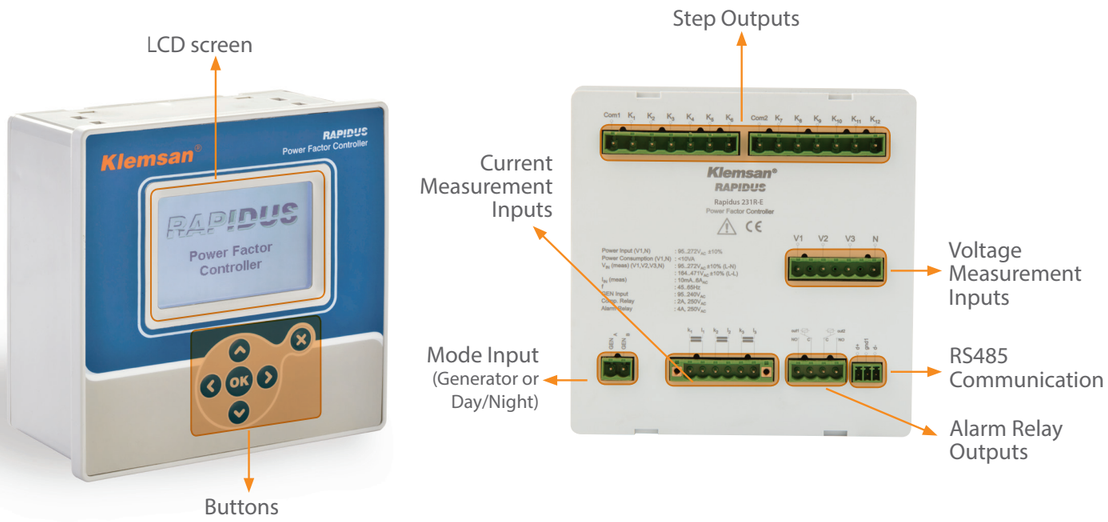
- Medium voltage modular cabinets
- Submetering station
- PLC-Scada applications
- Electric power plants and substations
- Electric utilities
- Enery meter applications
- Infrastructure
- Alarm station
- IT centres
- High-rise buildings

Benefits and Advantages

- Current inputs can withstand surges up to 100 A for 1 second
- State of the art technology; moduler design, no connector cables, no fixing screws inside
- Multiple compensation modes
- Capacitors and shunt reactors can be connected to each step
- Mono phase and 3 phase compensation
- Dynamic capacitor monitoring
- Learning connections and step powers
- Display of switching cycle for each step
- Display of connection time for each step
- Multi-language support
- Adjustable phase difference angle
- Energy meters
- Harmonic measurement up to 51st
- Programmable alarm output
- Modbus communication
- Real time clock
- Connection to current transformer x/1 A or x/5 A
- High measurement accuracy according to IEC standarts
- Easy configuration with integrated push buttons
- High level of Electromagnetic compatibility (EMC) i.e. maximum immunity to interferences
- Self-Extinguishing plastic housing

Layout & Mounting

Klemsan power factor devices are suitable for panel mounting for 96x96mm or 144x144mm standarts.



RAPIDUS 231R-E Power Factor Controller

Data Centers, UPS system

Rapidus reactive controller provides two way compensation with controlling capacitors and shunt reactors. Thus, it presents perfect solution for the places where the load is capacitive, such as data centers, mining areas, UPS system, energy transmission lines etc.

Dynamic Capacitor Monitoring(DCM)

DCM is a supreme function in Rapidus which enables the user to make pro-active maintenance for compensation cabinets. DCM tracks the real time KVAR values of each step and uses the measured KVAR value in compensation calculations.

Reducing Energy Loses

Limiting energy losses by Joule effect, increasing available active power to use better kW/KVA ratio, reducing level of system noises.

Reduction of the Electricity Bill

Depending on the different electrical tariffs in different countries, the cost of electricity can be reduced by balancing reactive energy or elemination of reactive penalty payments.

POWER FACTOR CONTROLLER

POWER FACTOR CONTROLLER
RAPIDUS Series

POWER FACTOR CONTROLLER
RAPIDUS Series

Energy Metering Applications

In standart compensation cabinets, there are always a multimeter or an analyzer to be associated with a power factor controller. Rapidus, as a two-in-one device meets both requirements of the industry. Users can reduce analyzer, wiring and labor costs by not using an external energy analyzer.

POWER FACTOR CONTROLLER
RAPIDUS Series

Steel Process Plants

Disconnection of capacitors can be provided by using alarm relay outputs of Rapidus. So undesired voltage levels in compensation panels and subsequent switchgear damages can be prevented before it is too late.

POWER FACTOR CONTROLLER
RAPIDUS Series

Industrial Plants

Low power factor problems which are occured in industrial facilities such as overloaded cables and transformers, reduced voltage level, poor quality motor performance, utility penalty payments etc. can be eliminated with proper analysis by a power factor contoller.

POWER FACTOR CONTROLLER
RAPIDUS Series

Contactor, Capacitor and Shunt Reactor Maintenance

Monitoring switching cycles and operation times for capacitors and shunt reactors helps you to understand how long they are used and how many times they are switched. Plus, DCM feature calculates exact step powers. So it is easy to define maintenance schedules for your compensation panels.

POWER FACTOR CONTROLLER
RAPIDUS Series

Alarm Control Applications

All necessary parameters such as voltage, current, frequency, temperature, step powers, Q/P ratios, harmonics etc. can be assigned to an alarm relay in order to provide system reliability and durability.
